

FEATURES

- Four Complete 12-Bit DACs in One IC Package
- Linearity Error $\pm 1/2\text{LSB } T_{\min} - T_{\max}$ (AD390K, T)
- Factory-Trimmed Gain and Offset
- Buffered Voltage Output
- Monotonicity Guaranteed Over Full Temperature Range
- Double-Buffered Data Latches
- Includes Reference and Buffer
- Fast Settling: $8\mu\text{s}$ max to $\pm 1/2\text{LSB}$

PRODUCT DESCRIPTION

The AD390 contains four 12-bit high speed voltage-output digital-to-analog converters in a compact 28-pin hybrid package. The design is based on a proprietary latched 12-bit DAC chip which reduces chip count and provides high reliability. The AD390 is ideal for systems requiring digital control of many analog voltages where board space is at a premium. Such applications include automatic test equipment, process controllers, and vector-scan displays.

The AD390 is laser-trimmed to $\pm 1/2\text{LSB}$ max nonlinearity (AD390KD, TD) and absolute accuracy of ± 0.05 percent of full scale. The high initial accuracy is made possible by the use of thin-film scaling resistors on the monolithic DAC chips. The internal buried Zener voltage reference provides excellent temperature drift characteristics ($20\text{ppm}/^\circ\text{C}$) and an initial tolerance of $\pm 0.03\%$ maximum. The internal reference buffer allows a single common reference to be used for multiple AD390 devices in large systems.

The individual DACs are accessed by the $\overline{\text{CS1}}$ through $\overline{\text{CS4}}$ control inputs and the $\overline{\text{A0}}$ and $\overline{\text{A1}}$ lines. These control signals permit the registers of the four DACs to be loaded sequentially and the outputs to be simultaneously updated.

The AD390 outputs are calibrated for a $\pm 10\text{V}$ output range with positive-true offset binary input coding. A 0 to +10V version is available on special order.

The AD390 is packaged in a 28-lead ceramic package and is specified for operation over the 0 to $+70^\circ\text{C}$ and -55°C to $+125^\circ\text{C}$ temperature range.

PRODUCT HIGHLIGHTS

1. The AD390 offers a dramatic reduction in printed circuit board space requirements in systems using multiple DACs.
2. Each DAC is independently addressable, providing a versatile control architecture for simple interface to microprocessors. All latch enable signals are level-triggered.
3. The output voltage is trimmed to a full scale accuracy of $\pm 0.05\%$. Settling time to $\pm 1/2\text{LSB}$ is 8 microseconds maximum.
4. An internal 10 volt reference is available or an external reference can be used. With an external reference, the AD390 gain TC is $\pm 5\text{ppm}/^\circ\text{C}$ maximum.
5. The proprietary monolithic DAC chips provide excellent linearity and guaranteed monotonicity over the full operating temperature range.
6. The 28-pin double-width hybrid package provides extremely high functional density. No external components or adjustments are required to provide the complete function.
7. The AD390SD and AD390TD feature guaranteed accuracy and linearity over the -55°C to $+125^\circ\text{C}$ temperature range.

NOTES

¹Timing specifications appear in Table 2.

²The AD390 outputs are guaranteed stable for load capacitances up to 300pF.

³± 10V range is standard. A 0 to 10V version is also available. To order, use the following part numbers:

AD50207-1 J Grade
 AD50207-2 K Grade
 AD50207-3 S Grade
 AD50207-4 T Grade
 AD50207-7 S/883B Grade
 AD50207-8 T/883B Grade

⁴FSR means Full Scale Range and is equal to 20V for a ± 10V range.

⁵Crosstalk is defined as the change in any one output as a result of any other output being driven from - 10V to + 10V into a 2kΩ load.

⁶The AD390 can be used with supply voltage as low as ± 11.4V, Figure 10.

Specifications subject to change without notice.
