### Description

The AS2431 is a three-terminal adjustable shunt regulator providing a highly accurate bandgap reference. The adjustable shunt regulator is ideal for a wide variety of linear applications that can be implemented using external components to obtain adjustable currents and voltages.

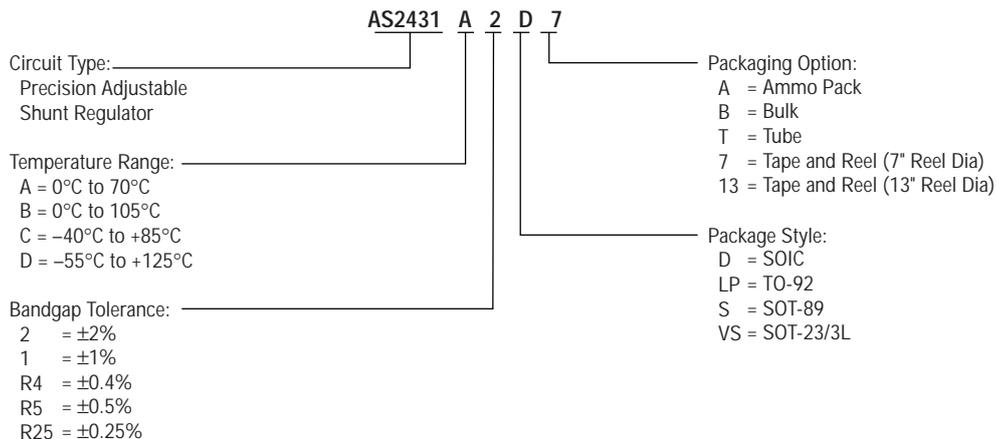

In the standard shunt configuration, the combination of low temperature coefficient (TC), sharp turn-on characteristics, low output impedance and programmable output voltage make this precision reference an excellent error amplifier.

The AS2431 is a direct replacement for the AS431 in low voltage, low current applications. It is also available in the very small footprint SOT-23.

### Electrical Characteristics

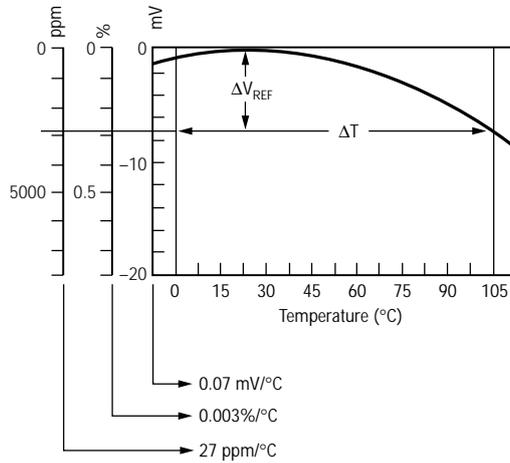

Electrical Characteristics are guaranteed over full junction temperature range (0 to 105°C). Ambient temperature must be derated based on power dissipation and package thermal characteristics. The conditions are:  $V_{KA} = V_{REF}$  and  $I_K = 10$  mA unless otherwise stated.

\*Calculating Average Temperature Coefficient (TC). Refer to following page.

Average Temperature Coefficient

- TC in mV/°C =  $\frac{\Delta V_{REF} \text{ (mV)}}{\Delta T_A}$
- TC in %/°C =  $\frac{\left(\frac{\Delta V_{REF}}{V_{REF \text{ at } 25^\circ\text{C}}}\right) \times 100}{\Delta T_A}$
- TC in ppm/°C =  $\frac{\left(\frac{\Delta V_{REF}}{V_{REF \text{ at } 25^\circ\text{C}}}\right) \times 10^6}{\Delta T_A}$
