Inspire the Linear Power

### 1.5Amp DC-to-DC Converter Control Circuit

## Description

The Bay Linear B34063A series is monolithic control circuit containing the primary functions required for DC-to-DC converters. These devices consist of an internal temperature compensated reference, comparator, controlled, duty cycle oscillator with an active current limit circuit, driver and high current output switch.

This series was specially designed to be incorporated in StepDown and Step-Up and voltage-inverting applications with a minimum number of external component.

The B34063A is offer in 8-pin DIP or Surface mount package.

## Features

- Operation from 3.0 V to 40 V input
- Low Standby Current
- Current Limiting
- Output Switch Current to 1.5A
- Output voltage Adjustable
- Frequency Operation to $100 \mathbf{k H z}$
- Precision 2\% Reference
- Step-Up-Step Down or inverting Switching regulator
- Direct Replacement for MC34063

## Applications

- CD ROM
- Mother Board
- SMPS Power Supply

## Pin Connection

Figure 1. Representative Schematic Diagram

## Ordering Information

| SO-8 <br> 8-pin | P-DIP <br> 8-pin | Operating <br> Temp. Range |
| :---: | :---: | :---: |
| B34063AM | B34063AP | $0^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ |
| B34063AIM | B34063AIP | $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ |
| B34063AEM | B34063AEP | $-40^{\circ} \mathrm{C}$ to $125^{\circ} \mathrm{C}$ |

All Marking will be B34063X. The Temperature will be specified in out side Box. $\mathrm{X}=$ Package type

8-Pin Surface Mount

## Absolute Maximum Rating

| Parameter | Symbol | Value | Unit |
| :--- | :---: | :---: | :---: |
| Supply Voltage | $\mathrm{V}_{\mathrm{CC}}$ | 40 | V |
| Comparator Input Voltage Range | $\mathrm{V}_{\mathrm{I}(\mathrm{COMP})}$ | $-0.3 \sim+40$ | V |
| Switch Collector Voltage | $\mathrm{V}_{\mathrm{C}(\mathrm{SW})}$ | 40 | V |
| Switch Emitter Voltage | $\mathrm{V}_{\mathrm{E}(\mathrm{SW})}$ | 40 | V |
| Switch Collector to Emitter <br> Voltage | $\mathrm{V}_{\mathrm{CE}(\mathrm{SW})}$ | 40 | V |
| Driver Collector Voltage | $\mathrm{V}_{\mathrm{C}(\mathrm{DR})}$ | 40 | V |
| Switch Current | $\mathrm{I}_{\mathrm{SW}}$ | I |  |

## Electrical Characteristics

$\left(\mathrm{V}_{\mathrm{CC}}=5.0 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=\mathrm{T}_{\text {LOW }}\right.$ to $\mathrm{T}_{\text {HIGH }}$ (Note 3), unless otherwise specified)

| Parameter | Symbol | Conditions | MIN | TYP | MAX | UNIT |

Note3: $\mathrm{T}_{\text {low }}=0^{\circ} \mathrm{C}$ for $\mathrm{B} 34063 \mathrm{~A},-40^{\circ} \mathrm{C}$ for $\mathrm{B} 34063 \mathrm{AI}, \mathrm{AE}, \mathrm{T}_{\text {high }}=+70^{\circ} \mathrm{C}$ for the $\mathrm{B} 34063 \mathrm{~A}, \mathrm{~T}_{\text {high }}=+85^{\circ} \mathrm{C}$ for the $\mathrm{B} 34063 \mathrm{AI},+125^{\circ} \mathrm{C}$ for the B34063AE
Note4: Low Duty cycle pulse techniques are used during test to maintain junction temp. as close to ambient temp. as possible.
Note5: If the output switch is driven into hard saturation (non-Darlington configuration) at low switch current ( $\leq 300 \mathrm{~mA}$ ) and high driver currents $(\geq 30 \mathrm{~mA})$. It may take up to $2.0 \mu$ sor it to come out of saturation. This condition will shorten the off time at frequencies $\geq 30 \mathrm{kHz}$. And is magnified at high temperatures. This condition does not occur with a Darlington configuration. Since the output switch can not saturate. If a nonDarlington configuration is used the following output drive condition is recommended:

Forces $\beta$ of output switch : Ic output/Ic driver $-7.0 \mathrm{~mA} \geq 10$
The $100 \Omega$ resistor is the emitter of the driver device requires about 7.0 mA before the output switch conducts

Advance Information- These data sheets contain descriptions of products that are in development. The specifications are based on the engineering calculations, computer simulations and/ or initial prototype evaluation.

Preliminary Information- These data sheets contain minimum and maximum specifications that are based on the initial device characterizations. These limits are subject to change upon the completion of the full characterization over the specified temperature and supply voltage ranges.

The application circuit examples are only to explain the representative applications of the devices and are not intended to guarantee any circuit design or permit any industrial property right to other rights to execute. Bay Linear takes no responsibility for any problems related to any industrial property right resulting from the use of the contents shown in the data book. Typical parameters can and do vary in different applications. Customer's technical experts must validate all operating parameters including " Typical" for each customer application.

## LIFE SUPPORT AND NUCLEAR POLICY

Bay Linear products are not authorized for and should not be used within life support systems which are intended for surgical implants into the body to support or sustain life, in aircraft, space equipment, submarine, or nuclear facility applications without the specific written consent of Bay Linear President.
