High Speed Buffer

CLM4121 / CLM4321

FEATURES

- **High Slew Rate. 2000V/μs**
- **Wide Bandwidth. 180MHz**
- **Peak Output Current 300mA**
- **Low Supply Current 7mA**
- **No Oscillations with Capacitive Loads**
- **5V to ±15V Operation Guaranteed**
- **Fully Specified to Drive 50Ω Lines**

APPLICATIONS

- **Coaxial Cable Driver**
- **Flash A/D Converter Driver**
- **Video DAC Buffer**
- **OP Amp Booster**
- **Video Amplifier**
- **High Frequency Filter**
- **Wide Bandwidth Signal Conditioning**
- **Radar**
- **Sonar**

GENERAL DESCRIPTION

The CLM4121 family are high speed unity gain buffers that slew at 2000V/μs, having a small signal bandwidth of 180MHz, delivers 150mA, yet draws only 7mA supply current.

The fast slew rate, wide bandwidth, and high output drive make the CLM4121 family the ideal choice for closed loop buffer applications with wide band op amps.

These same characteristics are the excellent choices for open loop applications such as driving coaxial and switched pair cables.

ORDERING INFORMATION

Part	Package	Temperature Range
CLM4121 N	NO8A (Plastic P Dip 8 Lead)	-40°C to 85°C
CLM4121 M	MO8B (SOIC 8 Lead)	-40°C to 85°C
CLM4321 N	NO8A (Plastic P Dip 8 Lead)	-25°C to 70°C
CLM4321 M	MO8B (SOIC 8 Lead)	-25°C to 70°C

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. DC and AC electrical specifications do not apply when operating the device beyond its rated operating conditions.

Note 2: Slew rate is measured with 50Ω source impedance at 25°C. For accurate measurements, the input slew rate should be at least 5000V/µs.

Note 3: The test circuit consists of the human body model of 120pF in series with 1500Ω.

Note 4: The maximum power dissipation is a function of $T_{J(max)}$, θ_{JA} and T_A. The maximum allowable power dissipation at any ambient temperature is $P_D = (T_{J(max)} - T_A)/\theta_{JA}$.

Note 5: Limits are guaranteed by testing, correlation or periodic characterization.

Note 6: For M & N package, θ_{JA} is measured by soldering the unit directly on a printed circuit board and V^- pins are connected to 2 square inches of 2 oz copper.
