30 kHz to 32 GHz GaAs MMIC Optical Modulator Driver Amplifier

Features

- ❑ Small Size
- ❑ High Gain: 12 dB Typical
- ❑ P1dB = +18 dBm, Typical
- ❑ 30 kHz to 32 GHz Bandwidth
- ❑ Low Gain Ripple: 1.0 dB pp Typical
- ❑ Sub 0.25 Micron PHEMT
- ❑ Low DC Power Consumption

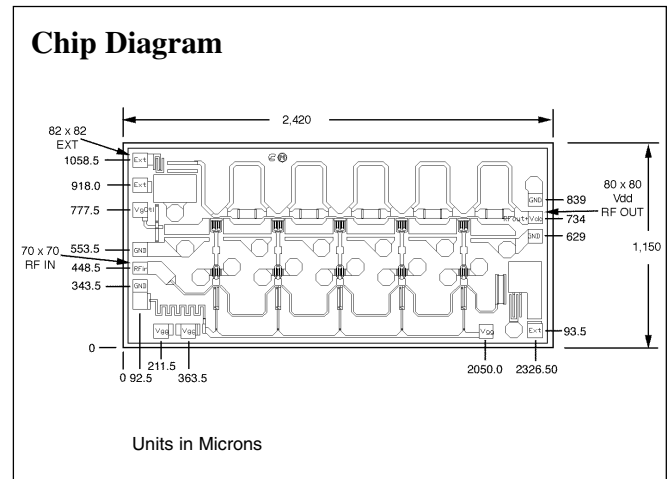

Applications

- ❑ Input Stage Driver for LiNbO₃ Modulator Driver Amplifier @ OC-192/OC-768
- ❑ Medium Power Linear Gain Block for Broadband Systems
- ❑ Receive Amplifier for OC-192 /OC-768

Description

The CMM2032-BD is a precision GaAs MMIC, medium power amplifier and is part of Celeritek's family of WideFiber™ products for optical communications applications.

The CMM2032-BD optical driver amplifier gives fiber optic system designers a unique combination of wide-band frequency coverage, along with a flat response and very low internal jitter. It is a precision PHEMT GaAs MMIC medium power amplifier with +18 dBm @ P1dB. It operates from 30 kHz to 32 GHz with 12 dB linear gain. Low internal

jitter makes it especially well suited for high speed digital data applications.

It is an excellent choice as an input stage amplifier for Lithium Niobate (Mach-Zehnder) external modulator driver amplifiers for OC-192/STM64 metropolitan and long-haul dense wave-division multiplexed optical networking applications and other high speed applications such as OC-768.

When used as an amplifier to drive Celeritek's CMM3030-BD as much as 7.5 V peak-to-peak can be achieved.

CMM2032-BD amplifiers are shipped in Gel Pack from Celeritek's foundry.

Specifications (T _A = 25°C, V _{DD} = 5V) (On-Wafer Probe)				
Parameters	Units	Min	Typ	Max
Frequency Range	—	30 kHz		32.0 GHz
Small Signal Gain	dB	11.0	12.0	
Gain Flatness	±dB		0.5	
Input VSWR	—		1.8:1	
Output VSWR	—		1.7:1	
Power Output (@1 dB Gain Compression) @ 9 GHz	dBm		+18.0	
Current	mA		100	150

Absolute Maximum Ratings

Parameter	Rating
Drain Voltage	12 V
Gate Voltage	-5 V
Drain Current	375 mA
Continuous Power Dissipation	3.0 W
Channel Temperature	+175°C
Storage Temperature	-65°C to +175°C
Mounting Temperature	+320°C
Input Power	+23 dBm

Die Attach and Bonding Procedures

Die Attach: Eutectic die attach is recommended. For eutectic die attach: Preform: AuSn (80% Au, 20% Sn); Stage Temperature: 290°C, ±5°C; Handling Tool: Tweezers; Time: 1 min or less.

Wire Bonding: Wire Size: 0.7 to 1.0 mil in diameter (pre-stressed); Thermocompression bonding is preferred over thermosonic bonding. For thermocompression bonding: Stage Temperature: 250°C; Bond Tip Temperature: 150°C; Bonding Tip Pressure: 18 to 40 gms depending on size of wire.

Typical Performance

Performance Optimization

Using the Gain-Ctl facility of the CMM2032-BD, output power may be increased by application of 1.2 to 1.8 Volts to the Bias Control pad. If the Gain-Ctl facility is not used, a fixed voltage at the Bias Control pad can be implemented by

connecting a off-chip parallel resistor to the pad which will lower the output voltage accordingly.

If Bias Control voltage is decreased further than those lowest values given in the tables, both gain and output power will start to drop.
