# LINEAR INTEGRATED CIRCUIT

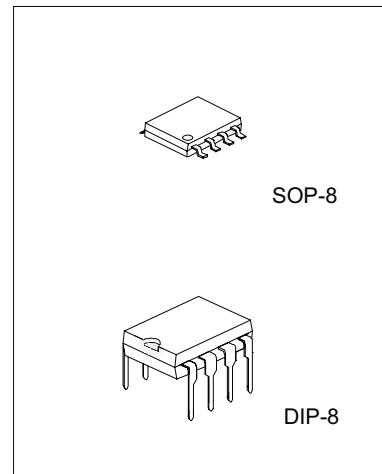

## LOW VOLTAGE AUDIO POWER AMPLIFIER

### DESCRIPTION

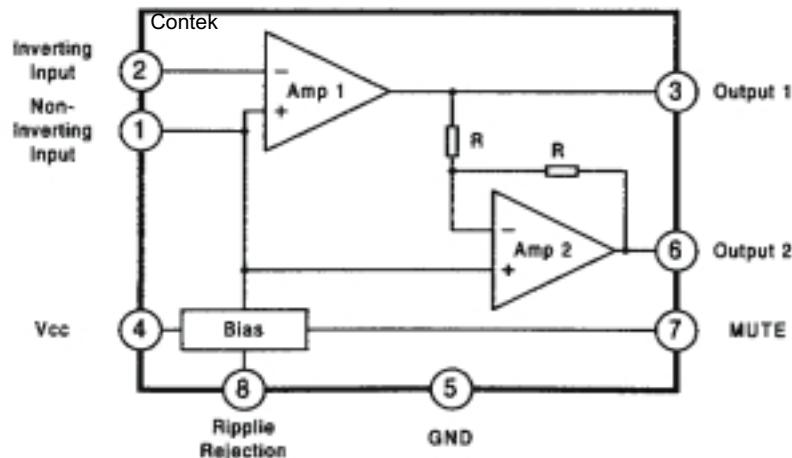

The Contek KA8602 is the audio power amplifier available for low voltage. The Contek KA8602 supplies differential outputs for maximizing output swing at low voltages. The Contek KA8602 does not need coupling capacitors to the speaker. The gain of this amplifier is controlled easily by two external resistors.

### FEATURES

- \*Wide operating supply voltage:  $V_{cc}=2V\sim16V$
- \*Low quiescent supply current(  $I_{cc}=2.7mA$ , typ)
- \*Medium output power(  $P_o=250mW$  at  $V_{cc}=6V$ ,  $R_L=32ohm$ , THD=10%
- \*Load impedance range:  $8\sim100ohm$
- \*Mute function ( $I_{cc}=65\mu A$ , typ)
- \*Minimum number of external parts required.
- \*Low distortion

## ABSOLUTE MAXIMUM RATINGS( $T_a=25\text{ }^{\circ}\text{C}$ )

| PARAMETER   | SYMBOL              | VALUE                 | UNIT |
|---|---------------------|-----------------------|------|
| Supply Voltage                                    | V <sub>cc</sub>     | -1~18                 | V    |
| Output Current                                    | I <sub>o</sub>      | +250                  | mA   |
| Maximum Input, Ripple Rejection, Mute Pin Voltage | V <sub>i(max)</sub> | -1~V <sub>cc</sub> +1 | V    |
| Applied Output Voltage( Output Pin When Disabled) | V <sub>o</sub>      | -1~V <sub>cc</sub> +1 | V    |
| Temperature Junction                              | T <sub>j</sub>      | -55 ~ 150             | C    |

## PIN CONFIGURATIONS

| PIN | NAME             | DESCRIPTION  |
|-----|------------------|--|
| 1   | Input(+)         | Analog Ground for the amplifiers. A 1 $\mu\text{F}$ capacitor at this pin ( with a 5 $\mu\text{F}$ capacitor at pin 8) provides 52dB( typ) of power supply rejection. Turn-on time of the circuit is affected by the capacitor on this pin. This pin can be used as an alternative input.  |
| 2   | Input(-)         | Amplifier input. The input capacitor and resistor set low frequency roll-off and input impedance. The feedback resistor is connected between this pin and output 1.  |
| 3   | Output 1         | Amplifier 1's output. The DC level is about $(V_{cc}-0.7\text{V})/2$ .   |
| 4   | V <sub>cc</sub>  | DC supply voltage is applied to this pin ( V <sub>cc</sub> =2~16V).  |
| 5   | GND              | Ground pin.  |
| 6   | Output 2         | Amplifier 2's output. This signal is equal in amplitude, but 180° out of phase with that output 1, the DC level is about $(V_{cc}-0.7\text{V})/2$ .  |
| 7   | Mute             | This pin can be used to power down the IC to conserve power, or for muting, or both. When at a logic LOW (less than 0.8V), the IC is enabled for normal operation. When at a logic HIGH (2V to V <sub>cc</sub> ), the IC is disabled. If Mute is open, that is equivalent to a logic LOW . |
| 8   | Ripple Rejection | A capacitor at this pin increase power supply rejection, and affects turn-on time. This pin can be left open if the capacitor at pin 1 is sufficient.  |

## RECOMMENDED OPERATION CONDITIONS( $T_a=25\text{ }^{\circ}\text{C}$ )

| PARAMETER                         | SYMBOL               | VALUE             | UNIT     |
|-----------------------------------|----------------------|-------------------|----------|
| Supply Voltage                    | V <sub>cc</sub>      | 2~16              | V        |
| Load Impedance                    | Z <sub>L</sub>       | 8~100             | $\Omega$ |
| Peak Load Current                 | I <sub>L(peak)</sub> | +200              | mA       |
| Differential Gain(5KHz Bandwidth) | $\Delta G_v$         | 0~46              | dB       |
| Voltage at Mute                   | V <sub>i(mute)</sub> | 0~V <sub>cc</sub> | V        |
| Ambient Temperature               | T <sub>a</sub>       | -20~470           | C        |
