

# DS1817 Active High 3.3V EconoReset

#### www.dalsemi.com

### **FEATURES**

- Automatically restarts a microprocessor after power failure
- Maintains reset for 150 ms after V<sub>CC</sub> returns to an in-tolerance condition
- Reduces need for discrete components
- Precision temperature-compensated voltage reference and voltage sensor
- Accurate 5%, 10% or 20% power monitoring
- 20% tolerance for use with 3.0-volt systems
- Low-cost TO-92 or space saving surface mount SOT-23 packages available
- Push-pull active high output
- Operating temperature -40°C to +85°C

## DESCRIPTION

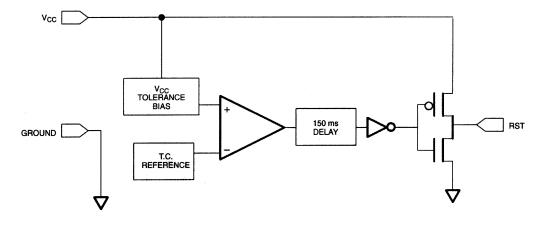

The DS1817 EconoReset uses a precision temperature reference and comparator circuit to monitor the status of the power supply  $(V_{CC})$ . When an out-of-tolerance condition is detected, an internal power-fail signal is generated which forces reset to the active state. When  $V_{CC}$  returns to an in-tolerance condition, the reset signal is kept in the active state for approximately 150 ms to allow the power supply and processor to stabilize.

## **OPERATION - POWER MONITOR**

The DS1817 provides the function of detecting out-of-tolerance power supply conditions and warning a processor based system of impending power failure. When  $V_{CC}$  is detected as out-of-tolerance, the RST signal is asserted. On power-up, RST is kept active for approximately 150 ms after the power supply has reached the selected tolerance. This allows the power supply and microprocessor to stabilize before RST is released.

<sup>\*</sup> This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

## **NOTES:**

- 1. All voltages are referenced to ground.
- 2. Measured with  $V_{CC} \ge 2.7V$ .
- 3. Measured with RST output open.
- 4. Measured with  $2.7V \ge V_{CC} \ge 3.3V$ .
- 5.  $t_R = 5 \mu s$ .
- 6. The  $t_F$  value is for reference in defining values for  $T_{RPD}$  and should not be considered a requirement for proper operation or use of the device.
