# 74LVT2245 • 74LVTH2245 Low Voltage Octal Bidirectional Transceiver with 3-STATE Inputs/Outputs and 25Ω Series Resistors in the B Port Outputs

### **General Description**

**Ordering Code:** 

FAIRCHILD

SEMICONDUCTOR TM

The LVT2245 and LVTH2245 contain eight non-inverting bidirectional buffers with 3-STATE outputs and are intended for bus-oriented applications. The Transmit/ Receive (T/R) input determines the direction of data flow through the bidirectional transceiver. Transmit (active-HIGH) enables data from A Ports to B Ports; Receive (active-LOW) enables data from B Ports to A Ports. The Output Enable input, when HIGH, disables both A and B Ports by placing them in a high impedance state. The equivalent 25Ω-series resistor in the B Port helps reduce output overshoot and undershoot.

The LVTH2245 data inputs include bushold, eliminating the need for external pull-up resistors to hold unused inputs.

These transceivers are designed for low voltage (3.3V)  $V_{CC}$  applications, but with the capability to provide a TTL interface to a 5V environment. The LVT2245 and LVTH2245 are fabricated with an advanced BiCMOS technology to achieve high speed operation similar to 5V ABT while maintaining low power dissipation.

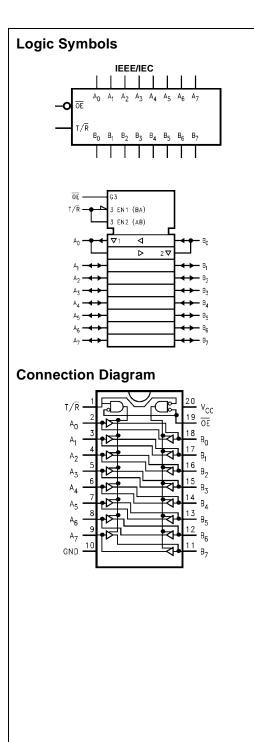

### **Features**

- $\blacksquare$  Input and output interface capability to systems at 5V  $\rm V_{CC}$
- Equivalent 25Ω series resistor on B Port outputs
- Bushold data inputs eliminate the need for external pull-
- up resistors to hold unused inputs (74LVTH2245), also available without bushold feature (74LVT2245)
- Live insertion/extraction permitted
- Power Up/Down high impedance provides glitch-free bus loading
- Outputs source/sink –12 mA/+12 mA on B Port, –32 mA/+64 mA on A Port
- Latch-up performance exceeds 500 mA

| Order Number  | Package Number | Package Description   |

| T <sub>A</sub>  | Free Air Operating Temperature                                       |        | -40 | +85 | °C         |
| Δt/ΔV           | Input Edge Rate, V <sub>IN</sub> = 0.8V–2.0V, V <sub>CC</sub> = 3.0V |        | 0   | 10  | ns/V       |

Note 1: Absolute Maximum continuous ratings are those values beyond which damage to the device may occur. Exposure to these conditions or conditions beyond those indicated may adversely affect device reliability. Functional operation under absolute maximum rated conditions is not implied. Note 2:  $\mathrm{I}_{\mathrm{O}}$  Absolute Maximum Rating must be observed.
