

August 1997 Revised July 2000

74VCX162838

Low Voltage 16-Bit Selectable Register/Buffer with 3.6V Tolerant Inputs and Outputs and 26 Ω Series Resistors in the Outputs

General Description

The VCX162838 contains sixteen non-inverting selectable buffered or registered paths. The device can be configured to operate in a registered, or flow through buffer mode by utilizing the register enable (REGE) and Clock (CP) signals. The device operates in a 16-bit word wide mode. All outputs can be placed into 3-State through the use of the OE pin. These devices are ideally suited for buffered or registered 168 pin and 200 pin SDRAM DIMM memory modules

The 74VCX162838 is designed for low voltage (1.65V to 3.6V) V_{CC} applications with I/O compatibility up to 3.6V. The VCX162838 is also designed with 26Ω series resistors in the outputs. This design reduces line noise in applications such as memory address drivers, clock drivers, and bus transceivers/transmitters.

The 74VCX162838 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining low CMOS power dissipation.

Features

- Compatible with PC100 and PC133 DIMM module specifications
- 1.65V-3.6V V_{CC} supply operation
- 3.6V tolerant inputs and outputs
- \blacksquare 26 Ω series resistors in the outputs
- t_{PD} (CP to O_n)

3.9 ns max for 3.0V to 3.6V V_{CC} 5.4 ns max for 2.3V to 2.7V V_{CC}

9.8 ns max for 1.65V to 1.95V $\ensuremath{\text{V}_{\text{CC}}}$

- Power-off high impedance inputs and outputs
- Supports live insertion and withdrawal (Note 1)
- Static Drive (I_{OH}/I_{OL})

 \pm 12 mA @ 3.0V V_{CC}

 ± 8 mA $\,$ @ 2.3V V $_{CC}$

 ± 3 mA @ 1.65V V_{CC}

- Uses patented noise/EMI reduction circuitry
- Latch-up performance exceeds 300 mA
- ESD performance:

Human body model > 2000V

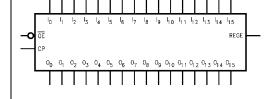

Machine model > 200V

Note 1: To ensure the high-impedance state during power up or power down, \overline{OE} should be tied to V_{CC} through a pull-up resistor. The minimum value of the resistor is determined by the current -sourcing capability of the driver

Ordering Code:

 X = Immaterial (HIGH or LOW, inputs may not float)
- Z = High Impedance

Functional Description

The 74VCX162838 consists of sixteen selectable noninverting buffers or registers with word wide controls. Mode functionality is selected through operation of the CP and REGE pin as shown by the truth table. When REGE is held at a logic "1" the device operates as a 16-bit register. Data is transferred from \boldsymbol{I}_n to \boldsymbol{O}_n on the rising edge of the CP pin. When the REGE pin is held at a logic "0" the device operates in a flow through mode and data propagates directly from the I to the O outputs. All outputs can be 3-stated by holding the OE pin at a logic "1".

Free Air Operating Temperature (T_A) -40°C to +85°C

Minimum Input Edge Rate ($\Delta t/\Delta V$)

 $V_{IN} = 0.8V$ to 2.0V, $V_{CC} = 3.0V$ 10 ns/V

Note 2: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 3: I_O Absolute Maximum Rating must be observed.

Note 4: Floating or unused inputs must be held HIGH or LOW.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
