## **DM74LS151**

## 1-of-8 Line Data Selector/Multiplexer

#### **General Description**

This data selector/multiplexer contains full on-chip decoding to select the desired data source. The DM74LS151 selects one-of-eight data sources. The DM74LS151 has a strobe input which must be at a low logic level to enable these devices. A high level at the strobe forces the W output HIGH, and the Y output LOW.

The DM74LS151 features complementary W and Y out-

#### **Features**

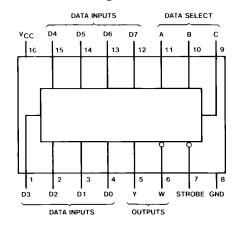

- Select one-of-eight data lines
- Performs parallel-to-serial conversion
- Permits multiplexing from N lines to one line
- Also for use as Boolean function generator
- Typical average propagation delay time data input to W output 12.5 ns
- Typical power dissipation 30 mW

### **Absolute Maximum Ratings**(Note 1)

Supply Voltage 7V Input Voltage 7V Operating Free Air Temperature Range 0°C to +70°C

Storage Temperature Range —65°C to +150°C

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

**Note 2:** All typicals are at  $V_{CC} = 5V$ ,  $T_A = 25^{\circ}C$ .

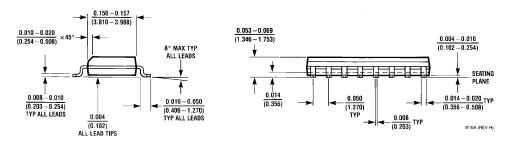

Note 3: Not more than one output should be shorted at a time, and the duration should not exceed one second.

Note 4: I<sub>CC</sub> is measured with all outputs OPEN, strobe and data select inputs at 4.5V, and all other inputs OPEN.
