## MM74HC589

## 8-Bit Shift Registers with Input Latches and 3-STATE Serial Output

## General Description

The MM74HC589 high speed shift register utilizes advanced silicon-gate CMOS technology to achieve the high noise immunity and low power consumption of standard CMOS integrated circuits, as well as the ability to drive 15 LS-TTL loads.
The MM74HC589 comes in a 16 -pin package and consists of an 8 -bit storage latch feeding a parallel-in, serial-out 8 bit shift register. Data can also be entered serially the shift register through the SER pin. Both the storage register and shift register have positive-edge triggered clocks, RCK and SCK, respectively. SLOAD pin controls parallel LOAD or serial shift operations for the shift register. The shift register has a 3-STATE output to enable the wire-ORing of multiple devices on a serial bus.

The 74 HC logic family is speed, function, and pin-out compatible with the standard 74LS logic family. All inputs are protected from damage due to static discharge by internal diode clamps to $\mathrm{V}_{\mathrm{CC}}$ and ground.

## Features

■ 8-bit parallel storage register inputs

- Wide operating voltage range: $2 \mathrm{~V}-6 \mathrm{~V}$
- Shift register has direct overriding load
- Guaranteed shift frequency. . . DC to 30 MHz
- Low quiescent current: $80 \mu \mathrm{~A}$ maximum (74HC Series)

■ 3-STATE output for 'Wire-OR'

## Absolute Maximum Ratings(Note 1)

(Note 2)
Supply Voltage ( $\mathrm{V}_{\mathrm{CC}}$ )
DC Input Voltage ( $\mathrm{V}_{\mathrm{IN}}$ )
DC Output Voltage ( $\mathrm{V}_{\text {OUT }}$ )
Clamp Diode Current ( $\mathrm{I}_{\mathrm{IK}}, \mathrm{I}_{\mathrm{OK}}$ )
DC Output Current, per pin (lout)
DC $\mathrm{V}_{\mathrm{CC}}$ or GND Current, per pin ( $\mathrm{I}_{\mathrm{CC}}$ )
Storage Temperature Range ( $\mathrm{T}_{\mathrm{STG}}$ )
Power Dissipation ( $\mathrm{P}_{\mathrm{D}}$ )
(Note 3)
S.O. Package only

Lead Temperature ( $\mathrm{T}_{\mathrm{L}}$ )
(Soldering 10 seconds)

## Recommended Operating

 Conditions|  | Min | Max | Units |
| :--- | :---: | :---: | :---: |
| Supply Voltage $\left(\mathrm{V}_{\mathrm{CC}}\right)$ | 2 | 6 | V |
| DC Input or Output Voltage |  |  |  |
| $\left(\mathrm{V}_{\text {IN }}, \mathrm{V}_{\mathrm{OUT}}\right)$ |  |  |  |

DC Electrical Characteristics (Note 4)

designing with this supply. Worst case $\mathrm{V}_{I H}$ and $\mathrm{V}_{I L}$ occur at $\mathrm{V}_{\mathrm{CC}}=5.5 \mathrm{~V}$ and 4.5 V respectively. (The $\mathrm{V}_{I H}$ value at 5.5 V is 3.85 V .) The worst case leakage current ( $I_{\mathrm{I}_{\mathrm{N}}}, \mathrm{I}_{\mathrm{CC}}$, and $\mathrm{I}_{\mathrm{OZ}}$ ) occur for CMOS at the higher voltage and so the 6.0 V values should be used.
