### NC7ST08

# TinyLogic™ HST 2-Input AND Gate

### **General Description**

The NC7ST08 is a single 2-Input high performance CMOS AND Gate, with TTL-compatible inputs. Advanced Silicon Gate CMOS fabrication assures high speed and low power circuit operation. ESD protection diodes inherently guard both inputs and output with respect to the  $V_{\rm CC}$  and GND rails. High gain circuitry offers high noise immunity and reduced sensitivity to input edge rate. The TTL-compatible inputs facilitate TTL to NMOS/CMOS interfacing. Device performance is similar to MM74HCT but with 1/2 the output current drive of HC/HCT.

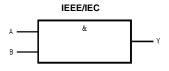

### **Features**

- Space saving SOT23 or SC70 5-lead package
- High Speed:  $t_{PD}$  6 ns (typ),  $V_{CC}$  = 5V,  $C_L$  = 15 pF,  $T_A$  = 25°C
- Low Quiescent Power,  $I_{CC} < 1 \mu A$ ,  $V_{CC} = 5.5 V$
- $\blacksquare$  Balanced Output Drive; 2 mA I $_{\rm OL}$ , –2 mA I $_{\rm OH}$
- TTL-compatible inputs

Note 1: Absolute Maximum Ratings are those values beyond which damage to the device may occur. The databook specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. Fairchild does not recommend operation of circuits outside the databook specifications.

Note 2: Unused inputs must be held HIGH or LOW. They may not float.

Note 3:  $C_{PD}$  is defined as the value of the internal equivalent capacitance which is derived from dynamic operating current consumption ( $I_{CCD}$ ) at no output loading and operating at 50% duty cycle. (See Figure 2.)  $C_{PD}$  is related to  $I_{CCD}$  dynamic operating current by the expression:  $I_{CCD} = (C_{PD})(V_{CC})(f_{\parallel N}) + (I_{CC}\text{static})$ .
