

## NDS352P P-Channel Logic Level Enhancement Mode Field Effect Transistor

### General Description

These P-Channel logic level enhancement mode power field effect transistors are produced using Fairchild's proprietary, high cell density, DMOS technology. This very high density process is especially tailored to minimize on-state resistance. These devices are particularly suited for low voltage applications such as notebook computer power management, portable electronics, and other battery powered circuits where fast high-side switching, and low in-line power loss are needed in a very small outline surface mount package.

### Features

- -0.85A, -20V.  $R_{DS(ON)} = 0.5\Omega$  @  $V_{GS} = -4.5V$ .
- Proprietary package design using copper lead frame for superior thermal and electrical capabilities.
- High density cell design for extremely low  $R_{DS(ON)}$ .
- Exceptional on-resistance and maximum DC current capability.
- Compact industry standard SOT-23 surface mount package.

Notes:

- $R_{\theta JA}$  is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins.  $R_{\theta JC}$  is guaranteed by design while  $R_{\theta CA}$  is determined by the user's board design.

$$P_D(t) = \frac{T_J - T_A}{R_{\theta J \theta A}} = \frac{T_J - T_A}{R_{\theta J \theta C} + R_{\theta C \theta A}} = I_D^2(t) \times R_{DS(on)} \theta_{TJ}$$

Typical  $R_{\theta JA}$  using the board layouts shown below on 4.5"x5" FR-4 PCB in a still air environment:

- 250°C/W when mounted on a 0.02 in<sup>2</sup> pad of 2oz copper.
- 270°C/W when mounted on a 0.001 in<sup>2</sup> pad of 2oz copper.

Scale 1 : 1 on letter size paper

- Pulse Test: Pulse Width  $\leq 300\mu\text{s}$ , Duty Cycle  $\leq 2.0\%$ .
