

FM811/812

Microprocessor Reset Circuits

Features

- Feature
- Precision Voltage Monitor for 3V, 3.3V or 5V Power Supplies
- 6 μ A Supply Current
- 140ms Minimum Reset Pulse Width
- $\overline{\text{RESET}}$ Remains Valid with V_{CC} as Low as 1.4V
- Active Low Manual Reset Input
- No External Components
- 4-Pin SOT-143 Package

Applications

- Critical Microprocessor Power Monitoring
- Portable Equipment
- Intelligent Instruments
- Computers & Printers
- Controllers

Typical Applications

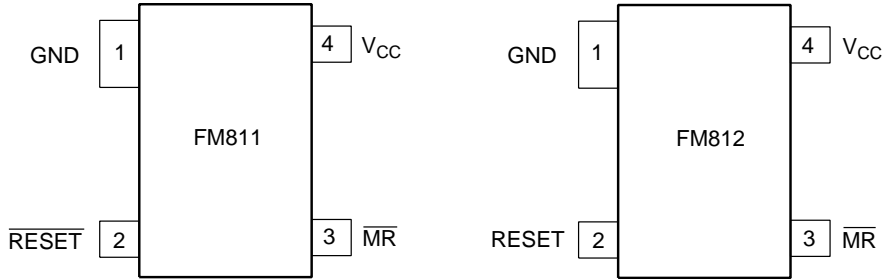

Description

The FM811/FM812 is a low cost microprocessor supervisory circuit that asserts a reset if the power supply drops below a designated threshold or the manual reset pin is forced low. Several different reset thresholds are available to accommodate systems operating at 3V, 3.3V or 5V.

The FM811 has an active low $\overline{\text{RESET}}$ output, while the FM812 offers an active high RESET output. The reset output is guaranteed to remain asserted for a minimum of 140ms after V_{CC} has risen above the designated reset threshold. The FM811/FM812 is available in a 4-pin SOT-143.

Pin Assignments

Pin Definitions

| Pin Name | Pin Number | | Description |
|---------------------------|------------|-------|---|
| | FM811 | FM812 | |
| GND | 1 | 1 | Ground Pin |
| $\overline{\text{RESET}}$ | 2 | N/A | $\overline{\text{RESET}}$ goes low if V_{CC} falls below the reset threshold and remains asserted for one reset time-out period (140ms min.) after V_{CC} exceeds the reset threshold. |
| RESET | N/A | 2 | RESET goes high if V_{CC} falls below the reset threshold and remains asserted for one reset time-out period (140ms min.) after V_{CC} exceeds the reset threshold. |
| $\overline{\text{MR}}$ | 3 | 3 | Manual reset input. Shorting this pin to GND forces a reset. The reset will remain asserted as long as $\overline{\text{MR}}$ is held low and for one reset time-out period (140ms min.) after $\overline{\text{MR}}$ goes high. This input cannot be driven by a CMOS or TTL logic. Push-button switch is recommended to be used with this pin. Float if unused. |
| V_{CC} | 4 | 4 | Power supply input, 3V, 3.3V, or 5V |

Preliminary Information

Absolute Maximum Ratings

| Parameter | Symbol | Ratings | Units |
|--|---------------------------|----------------------------|--------------|
| Terminal Voltage | V_{CC} | -0.3 to 6.0 | V |
| | \overline{MR} | -0.3 to ($V_{CC} + 0.3$) | V |
| Input Current | V_{CC}, \overline{MR} | 20 | mA |
| Output Current | RESET, \overline{RESET} | 20 | mA |
| Rate of Rise | V_{CC} | 100 | V/ μ s |
| Operating Temperature Range | T_A | -40 to +85 | $^{\circ}$ C |
| Storage Temperature Range | | -65 to +150 | $^{\circ}$ C |
| Lead Temperature Range | | 300 | $^{\circ}$ C |
| Power Dissipation ($T_A = +70^{\circ}$ C) | | 320 | mW |

Stresses above those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent device failure. Functionality at or above these limits is not implied. Exposure to absolute maximum ratings for extended periods may affect device reliability. Operating ranges define those limits between which the functionality of the device is guaranteed.

Electrical Characteristics

$V_{CC} = 5V$ for FM81_L/M/J, $V_{CC} = 3.3V$ for FM81_S/T, $V_{CC} = 3V$ for FM81_R, $T_A =$ Operating Temperature Range, unless otherwise noted.

| Parameter | Conditions | Min. | Typ. | Max. | Units |
|---|--|--|--|--|------------|
| Operating Voltage Range | $T_A = 0^{\circ}$ C to 70° C $T_A = -40^{\circ}$ C to 85° C | 1.4 1.6 | | 5.5 5.5 | V |
| Supply Current, I_{CC} | FM811L/M/J, FM812L/M/J $V_{CC} < 3.6V$, FM811R/S/T, FM812R/S/T | | 9 6 | 15 10 | μ A |

| \overline{MR} Pull-Up Resistance | | 10 | 20 | 30 | k Ω |
| \overline{MR} Glitch Immunity | | | 100 | | ns |

Circuit Description

Microprocessor Reset

The $\overline{\text{RESET}}$ pin is asserted whenever V_{CC} falls below the reset threshold voltage or if $\overline{\text{MR}}$ (manual reset) is forced low. The reset pin remains asserted for a period of 40ms after V_{CC} has risen above the reset threshold voltage or $\overline{\text{MR}}$ has returned high. The reset function ensures the microprocessor is properly reset and powers up into a known condition after a power failure. $\overline{\text{RESET}}$ will remain valid with V_{CC} as low as 1.4V.

V_{CC} Transients

The FM811/ FM812 are relatively immune to negative-going V_{CC} glitches below the reset threshold. Typically, a negative-going transient 125mV below the reset threshold with a duration of 50ms (25ms for FM81_R/S/T) or less will not cause an unwanted reset.

Manual Reset Function

Momentarily connecting the Manual Reset input pin ($\overline{\text{MR}}$) to GND forces a reset. Typically a Push-button switch is used in most of the applications to force a manual reset. See Typical Applications diagram. The reset will remain asserted as long as $\overline{\text{MR}}$ is held low and for one reset time-out period (140ms min.) after $\overline{\text{MR}}$ goes high. Note that this input cannot be driven by a CMOS or TTL logic. This pin should be left floating if manual reset feature is unused.

Interfacing to Bidirectional Reset Pins

The FM811/ FM812 can interface with μPs with bidirectional reset pins by connecting a 4.7k Ω resistor in series with the FM811/ FM812 output and the μP reset pin.

$\overline{\text{RESET}}$ Valid to 0V

A resistor can be added from the $\overline{\text{RESET}}$ pin to ground to ensure the $\overline{\text{RESET}}$ output remains low with V_{CC} down to 0V. A 100k Ω resistor connected from $\overline{\text{RESET}}$ to ground is recommended. The size of the resistor should be large enough to not load the $\overline{\text{RESET}}$ output and small enough to pull-down any stray leakage currents.

Packaging Information

4-Pin SOT-143

Tape and Reel Information

Preliminary Information

Ordering Information

| Part Number | Top Marking* | RESET Threshold (V) | Output Type | Package | Packing Method |
|-------------|--------------|---------------------|------------------------|---------------|-------------------|
| FM811LUX | KLYY | 4.63 | Push-Pull, active LOW | 4-Pin, SOT143 | 3000 units in T&R |
