Note 1: The Absolute Maximum Ratings are those values beyond which he safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical
Characteristics tables are not guaranteed at the absolute maximum rating.
The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 2: The input and output negative voltage ratings may be exceeded if the input and output diode current ratings are observed.
Note 3: Unused control inputs must be held HIGH or LOW. They may not float.

Resistance of the switch and the 50 pF load capacitance, when driven by an ideal voltage the source (zero output impedance).
