

FAN8045G3

4-CH Motor Driver (5 Input & 4 Output)

Features

- 4-CH Balanced Transformerless (BTL) Driver
- Optional Input (CH4,5) For Output CH4
- Operating Supply Voltage : 4.5 V ~ 14V
- Built-in Thermal Shut Down Circuit (TSD)
- Built-in Channel Mute Circuit
- Built-in 1-OP AMP
- TSD Monitoring Function

Description

The FAN8045G3 is a monolithic integrated circuit suitable for a 4-CH motor driver which drives a tracking actuator, a focus actuator, a sled motor, a spindle motor, and a tray motor of the CDP/CAR-CD/DVDP systems.

28-SSOPH-375SG2

Typical Application

- Compact Disk Player
- Video Compact Disk Player
- Car Compact Disk Player
- Digital Video Disk Player

2. TSD Function

- When the chip temperature reaches to 167°C by abnormal condition, the TSD circuit is activated
- During TSD Function is activated, OP-AMP Output (pin 6) remains below 0.5V. (TSD monitoring function).
- This makes the bias current of the output drivers shut down, and all the output drivers are on cut-off state. Therefore the chip temperature begins to decrease.
- When the chip temperature falls to 63°C, the TSD circuit is deactivated and the output drivers start to operate normally.

3. Notice

- If REF1(pin1) or REF2(pin25) is lower than 0.7V, BTL Output is off.
- Under Voltage Protection Function. (If SVcc is lower than 3.8V, Chip is disable. Hysterisis is 0.2V)
- Mute ON BTL OutPut Voltage is as followed:
 - Mute ON BTL Output (CH1,2) = (PVcc1) / 2
 - Mute ON BTL Output (CH3,4) = ((PVcc2-0.6) / 2
- Each output to output and output to GND short should be kept away.
