

FDFS2P106A

Integrated 60V P-Channel PowerTrench® MOSFET and Schottky Diode

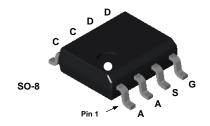

General Description

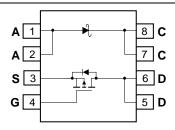

The FDFS2P106A combines the exceptional performance of Fairchild's PowerTrench MOSFET technology with a very low forward voltage drop Schottky barrier rectifier in an SO-8 package.

This device is designed specifically as a single package solution for DC to DC converters. It features a fast switching, low gate charge MOSFET with very low onstate resistance. The independently connected Schottky diode allows its use in a variety of DC/DC converter topologies.
