

**FEATURES**

- dual channel signal processing
- 2nd (4th) order state variable filter
- adjustable crossover frequency
- adjustable compression ratio from 1:1 to 4:1
- independent compression ratio adjustment for low and high frequency band
- adjustable AGC threshold levels
- unique twin average detectors
- handles high input levels
- low THD and IMD distortion
- drives class D Integrated Receivers
- MPO range externally adjustable

**DEVICE DESCRIPTION**

The DynamEQ® II hybrid family is a second generation Wide Dynamic Range Compression (WDRC) system.

GS3027 (GS3028) Hybrid incorporates 12 dB/oct (24 dB/oct) filtering and is designed to accommodate CIC and ITC size requirements.

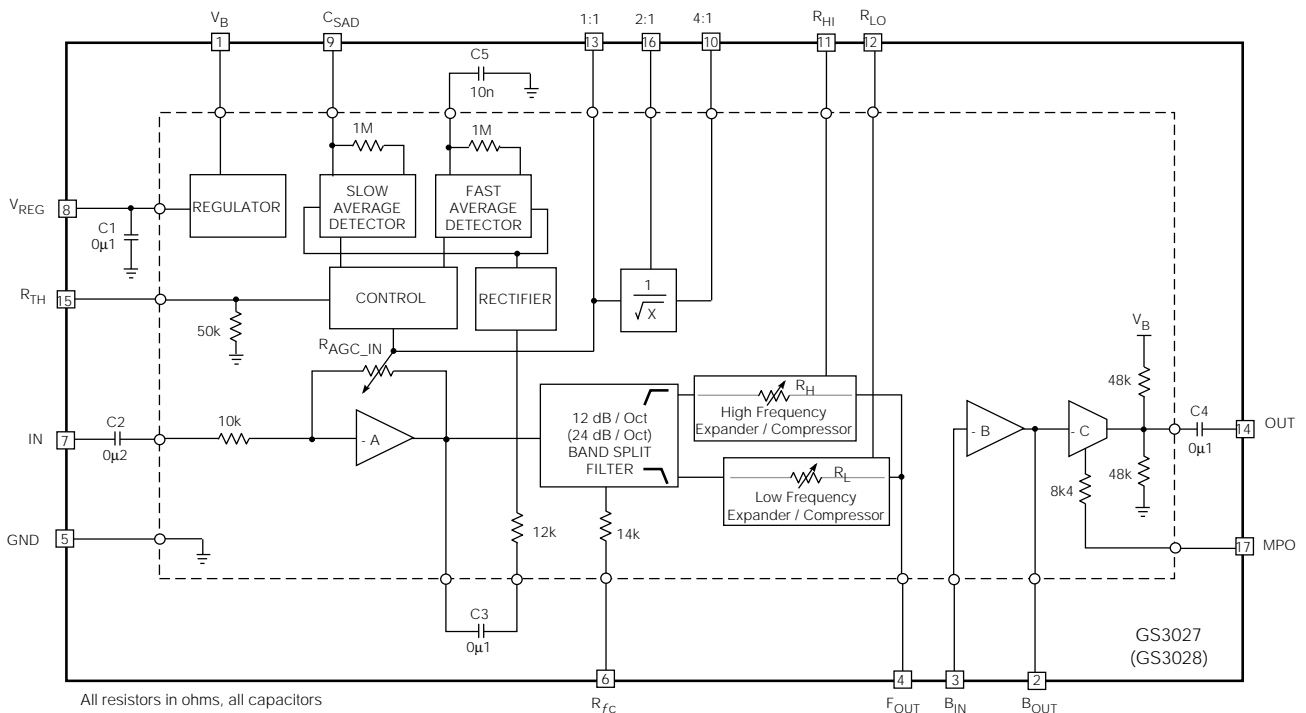

The gain and frequency response is dependant on the user's environment.

Twin averaging detector circuits are optimized for sound quality during normal listening without sacrificing comfort during sudden loud inputs.

All input signals to DynamEQ® II, are processed by 2:1 compression before subsequent band splitting.

The 12 dB/oct (24 dB/oct) band split filter ahead of the expander/compressor circuits allows for independent compression ratio adjustment (1:1 to 4:1) in high and low frequency channels.

The gain setting stage is followed by a class D Integrated Receiver preamplifier stage. Symmetrical peak clipping is used to achieve MPO adjustment.

All resistors in ohms, all capacitors in microfarads, unless otherwise stated  
Patent Pending
