## HD74ALVCH16501

## 18-bit Universal Bus Transceivers with 3-state Outputs <br> HITACHI

## Description

Data flow in each direction is controlled by output enable (OEAB and $\overline{\text { OEBA }}$ ), latch enable (LEAB and LEBA), and clock (CLKAB and CLKBA) inputs. For A to $B$ data flow, the device operates in the transparent mode when LEAB is high. When LEAB is low, the A data is latched if CLKAB is held at a high or low logic level. If LEAB is low, the A bus data is stored in the latch flip flop on the low to high transition of CLKAB. When OEAB is high, the outputs are active. When OEAB is low, the outputs are in the high impedance state. Data flow for B to A is similar to that of A to B but uses $\overline{\mathrm{OEBA}}$, LEBA, and CLKBA. The output enables are complementary (OEAB is active high, and $\overline{\mathrm{OEBA}}$ is active low). Active bus hold circuitry is provided to hold unused or floating data inputs at a valid logic level.

## Features

- $\mathrm{V}_{\mathrm{CC}}=2.3 \mathrm{~V}$ to 3.6 V
- Typical $\mathrm{V}_{\mathrm{OL}}$ ground bounce $<0.8 \mathrm{~V}\left(@ \mathrm{~V}_{\mathrm{CC}}=3.3 \mathrm{~V}, \mathrm{Ta}=25^{\circ} \mathrm{C}\right)$
- Typical $\mathrm{V}_{\mathrm{OH}}$ undershoot $>2.0 \mathrm{~V}\left(@ \mathrm{~V}_{\mathrm{CC}}=3.3 \mathrm{~V}, \mathrm{Ta}=25^{\circ} \mathrm{C}\right)$
- High output current $\pm 24 \mathrm{~mA}\left(@ \mathrm{~V}_{\mathrm{CC}}=3.0 \mathrm{~V}\right)$
- Bus hold on data inputs eliminates the need for external pullup / pulldown resistors

## HD74ALVCH16501

Function Table *3

| Inputs |  |  |  | Output B |
| :---: | :---: | :---: | :---: | :---: |
| OEAB | LEAB | CLKAB | A |  |
| L | X | X | X | Z |
| H | H | X | L | L |
| H | H | X | H | H |
| H | L | $\uparrow$ | L | L |
| H | L | $\uparrow$ | H | H |
| H | L | H | X | $\mathrm{B}_{0}{ }^{+1}$ |
| H | L | L | X | $\mathrm{B}_{0}{ }^{2}$ |

H: High level
L : Low level
X : Immaterial
Z : High impedance
$\uparrow$ : Low to high transition
Notes: 1. Output level before the indicated steady state input conditions were established.
2. Output level before the indicated steady state input conditions were established, provided that CLKAB was high before LEAB went low.
3. $A$ to $B$ data flow is show; $B$ to $A$ flow is similar but uses $\overline{O E B A}$, LEBA, and CLKBA.

Pin Arrangement

## HD74ALVCH16501

| Absolute Maximum Ratings |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Item | Symbol | Ratings | Unit | Conditions |
| Supply voltage | $\mathrm{V}_{\mathrm{cc}}$ | -0.5 to 4.6 | V |  |
| Input voltage ${ }^{\bullet 1,2}$ | V | -0.5 to 4.6 | V | Except I/O ports |
|  |  | -0.5 to $\mathrm{V}_{\mathrm{cc}}+0.5$ |  | I/O ports |
| Output voltage ${ }^{+1,2}$ | $\mathrm{V}_{0}$ | -0.5 to $\mathrm{V}_{\mathrm{cc}}+0.5$ | V |  |
| Input clamp current | $\mathrm{I}_{\text {IK }}$ | -50 | mA | $V_{1}<0$ |
| Output clamp current | $\mathrm{I}_{\text {ок }}$ | $\pm 50$ | mA | $\mathrm{V}_{\mathrm{O}}<0$ or $\mathrm{V}_{\mathrm{O}}>\mathrm{V}_{\mathrm{cc}}$ |
| Continuous output current | $\mathrm{I}_{0}$ | $\pm 50$ | mA | $\mathrm{V}_{\mathrm{o}}=0$ to $\mathrm{V}_{\mathrm{cc}}$ |
|  |  | $\pm 100$ |  |  |
| Maximum power dissipation at $\mathrm{Ta}=55^{\circ} \mathrm{C}$ (in still air) ${ }^{* 3}$ | $\mathrm{P}_{\mathrm{T}}$ | 1 | W | TSSOP |
| Storage temperature | Tstg | -65 to 150 | ${ }^{\circ} \mathrm{C}$ |  |

Notes: Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute maximum rated conditions for extended periods may affect device reliability.

1. The input and output negative voltage ratings may be exceeded if the input and output clamp current ratings are observed.
2. This value is limited to 4.6 V maximum.
3. The maximum package power dissipation is calculated using a junction temperature of $150^{\circ} \mathrm{C}$ and a board trace length of 750 mils.

## Recommended Operating Conditions

| Item | Symbol | Min | Max | Unit | Conditions |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Supply voltage | $\mathrm{V}_{\mathrm{cc}}$ | 2.3 | 3.6 | V |  |
| Input voltage | $V_{1}$ | 0 | $\mathrm{V}_{\mathrm{cc}}$ | V |  |
| Output voltage | $\mathrm{V}_{0}$ | 0 | $\mathrm{V}_{\mathrm{cc}}$ | V |  |
| High level output current | $\mathrm{IOH}_{\mathrm{OH}}$ | - | -12 | mA | $\mathrm{V}_{\mathrm{cc}}=2.3 \mathrm{~V}$ |
|  |  | - | -12 |  | $\mathrm{V}_{\mathrm{CC}}=2.7 \mathrm{~V}$ |
|  |  | - | -24 |  | $\mathrm{V}_{\mathrm{cc}}=3.0 \mathrm{~V}$ |
| Low level output current | $\mathrm{I}_{\mathrm{OL}}$ | - | 12 | mA | $\mathrm{V}_{\mathrm{CC}}=2.3 \mathrm{~V}$ |
|  |  | - | 12 |  | $\mathrm{V}_{\mathrm{cc}}=2.7 \mathrm{~V}$ |
|  |  | - | 24 |  | $\mathrm{V}_{\mathrm{cc}}=3.0 \mathrm{~V}$ |
| Input transition rise or fall rate | $\Delta t / \Delta v$ | 0 | 10 | ns / V |  |
| Operating temperature | Ta | -40 | 85 | ${ }^{\circ} \mathrm{C}$ |  |

Note: Unused control inputs must be held high or low to prevent them from floating.

| $\mathrm{~V}_{\mathrm{OH} 1}$ | 2.3 V | 3.0 V |
| $\mathrm{~V}_{\mathrm{OL} 1}$ | GND | GND |

Notes: 1. All input pulses are supplied by generators having the following characteristics: $\mathrm{PRR} \leq 10 \mathrm{MHz}, \mathrm{Zo}=50 \Omega$, $\mathrm{tr} \leq 2.5 \mathrm{~ns}, \mathrm{tf} \leq 2.5 \mathrm{~ns}$.
2. Waveform - A is for an output with internal conditions such that the output is low except when disabled by the output control.
3. Waveform - $B$ is for an output with internal conditions such that the output is high except when disabled by the output control.
4. The output are measured one at a time with one transition per measurement.

## Cautions

1. Hitachi neither warrants nor grants licenses of any rights of Hitachi's or any third party's patent, copyright, trademark, or other intellectual property rights for information contained in this document. Hitachi bears no responsibility for problems that may arise with third party's rights, including intellectual property rights, in connection with use of the information contained in this document.
2. Products and product specifications may be subject to change without notice. Confirm that you have received the latest product standards or specifications before final design, purchase or use.
3. Hitachi makes every attempt to ensure that its products are of high quality and reliability. However, contact Hitachi's sales office before using the product in an application that demands especially high quality and reliability or where its failure or malfunction may directly threaten human life or cause risk of bodily injury, such as aerospace, aeronautics, nuclear power, combustion control, transportation, traffic, safety equipment or medical equipment for life support.
4. Design your application so that the product is used within the ranges guaranteed by Hitachi particularly for maximum rating, operating supply voltage range, heat radiation characteristics, installation conditions and other characteristics. Hitachi bears no responsibility for failure or damage when used beyond the guaranteed ranges. Even within the guaranteed ranges, consider normally foreseeable failure rates or failure modes in semiconductor devices and employ systemic measures such as failsafes, so that the equipment incorporating Hitachi product does not cause bodily injury, fire or other consequential damage due to operation of the Hitachi product.
5. This product is not designed to be radiation resistant.
6. No one is permitted to reproduce or duplicate, in any form, the whole or part of this document without written approval from Hitachi.
7. Contact Hitachi's sales office for any questions regarding this document or Hitachi semiconductor products.
