## Features

- $1 / 3$ bias, $1 / 4$ duty, $32 \times 4$ pattern, 3.0V LCD driver

## General Description

HT1134A is an LCD Pin Ball game designed by HOLTEK. It has a built-in sound effect driver to create vivid results. It is much like a real pin ball. This game contains five levels. The higher the level is, the faster is the speed. When the

- 12 kinds of sound effects
- RC oscillator
score reaches a certain number, the level goes up. The highest score is up to 19990. The level can be set up before the game starts. It is not necessary to start from level 1-1.

LCD Pattern

## Functional Description

## Key description

- RESET

Pressing this key at any time resets the system back to the starting condition and the highest score is cleared.

- PAUSE

Pressing this key any time after power on, can temporarily stop the game, freeze the screen and stop the sound effects. Press this key again, and the game will continue. During the pause condition, all the other keys have no effect except OFF and RESET key.

- OFF

Pressing this key any time after power on, can clear the screen. Except turning on the power again, all the other keys are disabled and the entire system goes into the low power mode. It is similar with the power off condition, however, the highest records are kept.

- MUTE

This key can turn the sound effects on or off without disturbing the game. When power is on, press this key to turn off the sound effects. Press it again to restore the sound effects.

- START/ON

When power is off, this key is to turn on the power. When power is on, this key is to restart the game.

- LFLIP

Press this key to move up two flips on the left of the screen. When it is released, theflips are moved down.

- RFLIP

At the beginning of the game, this functions as in serving a ball. When the ball gets into the activity zone, it becomes a right flip which has the same function as LF LIP.

## Operational description

There are five levels in this game. E ach level has different shifting speed. The higher the level is, the faster is the speed. When START/ON key is pressed, the highest score is shown and the initial level is displayed. Player can press RFLIP to select the level. After that, press START/ON key to start the game. Press RFLIP to serve the ball, when the ball drops, depending on its position press LF LIP or RFLIP to flip the ball and prevent it from dropping to the goal. The strength to serve a ball depends on the length of time alloted in pressing RFLIP key. There is a gate at the bottom left side of the screen. The gate will open or close at intervals. The ball should be prevented from dropping down to the gate when it is open. There are only three balls served in each level. When the score reaches 3000 or 7000 , one ball is relatively added as bonus. When power is on, or player has to select a level, or when the game is over, if the player does not press any key at any one of the three conditions, then it automatically goes into free run within one minute. During free run, if START/ON or OFF key is pressed, then the game starts, or the power is off. Otherwise, if the free run lasts about 4 minutes 20 seconds, the power is automatically turned off. The highest score is lost only when RESET key is pressed or when the battery is changed.

- LCD test pattern

At any time, press LFLIP or RFLIP key simultaneously with RESET key, then release the RESET key, all the LCD patterns are shown. When LFLIP or RFLIP key is also released, the program goes back to normal.

## Counting method

- 10 score is counted when the ball is touched once with left or right flip.
- 10 score is counted when the ball is touched once with the three circles. 30 score is counted if it gets into any one of the circles.
- 30 score is counted when the ball is passing through the left or the right gate.
- 50 score is counted when the ball gets into the two circles located between screen.
- 30 score is counted when the ball gets into the gate at the bottom left.
- When the ball is served, 10 or 20 or 30 score is counted depending on the path it takes to get into the activity zone. The smaller the strength to serve the ball, the lower is the score.

## Sound effects

There are 12 kinds of sound effects in this game.

- Power on sound
- Game start
- Sound of serving a ball
- Sound that the ball is touched with circle or right or left flip
- Sound that the ball gets into the circle
- Sound that the ball gets into the rotating circle
- Sound that the ball is shifting
- Sound that the ball is in the hole
- Sound that the ball is passing through the gate
- Sound that the ball is dropping into the goal
- Game over sound
- Sound that the flips flip the ball
