Description

The LED material used in these devices is the very efficient absorbing Substrate aluminum indium gallium phosphide (AS AlInGaP), capable of producing high light output over a wide range of drive currents.

These solid state surface mount indicators are designed with a flat top and sides to be easily handled by automatic placement equipment. A glue pad is provided for adhesive mounting processes. They are compatible with convective IR and vapor phase reflow soldering, through the wave (TTW) soldering, and conductive epoxy attachment processes.

The package size and configuration conform to the EIA-535

BAAC standard specification for case size 3528 tantalum capacitors. The folded leads permit dense placement and provide an external solder joint for ease of inspection.

These devices are non-diffused, providing high intensity for applications such as backlighting, light pipe illumination, and front panel indication.

Tape and Reel Specifications

Hewlett Packard surface mount LEDs are packaged tape and reel in accordance with EIA-481A, *Taping of Surface Mount*

Components for Automatic Placement. This packaging system is compatible with taped automatic pick and place systems. Each reel is sealed in a

vapor barrier bag for added protection. Bulk packaging in vapor barrier bags is available upon special request.

Notes:

1. Derate linearly as shown in Figure 4.
2. Refer to Figure 5 to establish pulsed operating conditions.
3. The transient peak current is the maximum non-recurring peak current the device can withstand without damaging the LED die and wire bonds.
4. Drive currents between 5 mA and 30 mA are recommended for best long term performance.
5. Operation at currents below 5 mA is not recommended, please contact your Hewlett-Packard sales representative.
