

# Frequency Timing Generator for PENTIUM II/III™ Systems

## General Description

The ICS9250-11 is a main clock synthesizer chip for Pentium II based systems using Rambus Interface DRAMs. This chip provides all the clocks required for such a system when used with a Direct Rambus Clock Generator (DRCG) chip such as the ICS9212-01, 02, 03 and a PCI buffer 9112-17.

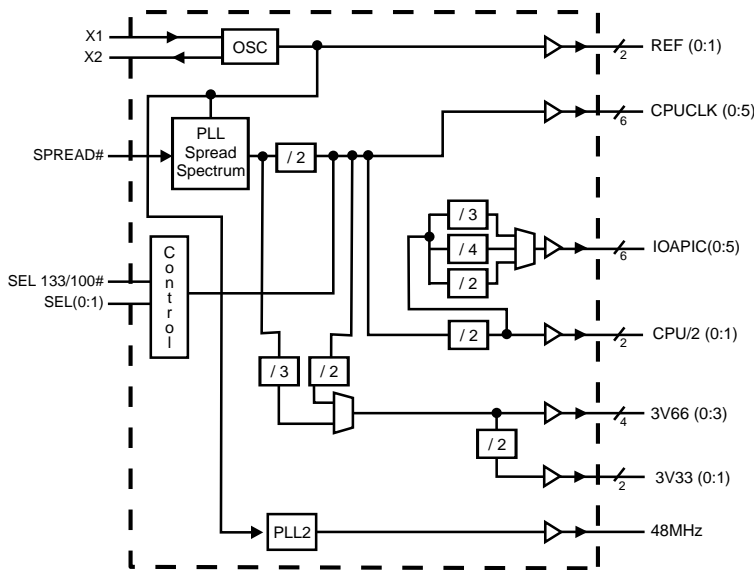

Spread Spectrum may be enabled by driving the SPREAD# pin active. Spread spectrum typically reduces system EMI by 8dB to 10dB. This simplifies EMI qualification without resorting to board design iterations or costly shielding. The ICS9250-11 employs a proprietary closed loop design, which tightly controls the percentage of spreading over process and temperature variations.

The CPU/2 clocks are inputs to the DRCG.

## Features

- Generates the following system clocks:
  - 6 - CPU Clocks 100/133MHz (2.5V).
  - 2 - CPU/2 output for synchronous memory reference (2.5V).
  - 4 - fixed frequency Clocks @ 66.6MHz (3.3V).
  - 2 - fixed frequency Clocks @ 33.3MHz (3.3V).
  - 6 - IOAPIC Clocks @ 1/4 of CPUCLK or 16.667MHz, synchronous to CPU Clock (2.5V)
  - 1 - 48MHz Clock (3.3V)
  - 2 - REF Clocks @ 14.31818MHz
- 0.5% typical down spread modulation on CPU, PCI, IOAPIC, 3V66 and CPU/2 output clocks.
- Uses external 14.318MHz crystal.
