### 4A, 600V Ultrafast Diodes

The RURD460, and RURD460S are ultrafast diodes with soft recovery characteristics ( $t_{rr}$  < 55ns). They have low forward voltage drop and are silicon nitride passivated ionimplanted epitaxial planar construction.

These devices are intended for use as freewheeling/ clamping diodes and rectifiers in a variety of switching power supplies and other power switching applications. Their low stored charge and ultrafast soft recovery minimize ringing and electrical noise in many power switching circuits reducing power loss in the switching transistors.

Formerly developmental type TA49035.
