2.5A, 30V, 0.150 Ohm, Dual P-Channel LittleFET™ Power MOSFET

The RF1K49223 Dual P-Channel power MOSFET is manufactured using an advanced MegaFET process. This process, which uses feature sizes approaching those of LSI integrated circuits, gives optimum utilization of silicon, resulting in outstanding performance. It is designed for use in applications such as switching regulators, switching converters, motor drivers, relay drivers, and low voltage bus switches. This device can be operated directly from integrated circuits.

Formerly developmental type TA49223.

Ordering Information

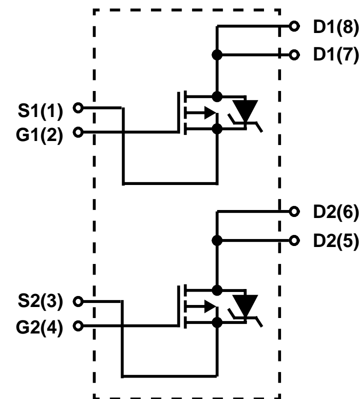
PART NUMBER	PACKAGE	BRAND
RF1K49223	MS-012AA	RF1K49223

NOTE: When ordering, use the entire part number. For ordering in tape and reel, add the suffix 96 to the part number, i.e. RF1K4922396.

Features

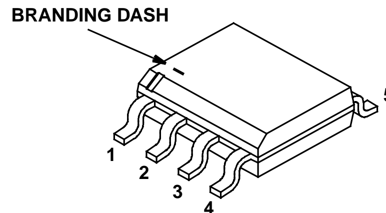
- 2.5A, 30V
- $r_{DS(ON)} = 0.150\Omega$
- Temperature Compensating PSPICE® Model
- Thermal Impedance PSPICE Model
- Peak Current vs Pulse Width Curve
- UIS Rating Curve
- Related Literature
  - TB334 “Guidelines for Soldering Surface Mount Components to PC Boards”

Symbol



Packaging

JEDEC MS-012AA



CAUTION: These devices are sensitive to electrostatic discharge; follow proper ESD Handling Procedures.

Absolute Maximum Ratings $T_A = 25^oC$ Unless Otherwise Specified

		RF1K49223	UNITS
Drain to Source Voltage	V_{DSS}	-30	V
Drain to Gate Voltage ($R_{GS} = 20k\Omega$)	V_{DGR}	-30	V
Gate to Source Voltage	V_{GS}	±20	V
Drain Current			
Continuous (Pulse Width = 5s)	I_D	2.5	A
Pulsed	I_{DM}	Refer to Peak Current Curve	
Pulsed Avalanche Rating	E_{AS}	Refer to UIS Curve	
Power Dissipation	P_D	2	W
Derate Above 25^oC		0.016	$W/^oC$
Operating and Storage Temperature	T_J, T_{STG}	-55 to 150	^oC
Maximum Temperature for Soldering			
Leads at 0.063in (1.6mm) from Case for 10s	T_L	300	^oC
Package Body for 10s, See Techbrief 334	T_{pkg}	260	^oC

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTE:

1. $T_J = 25^oC$ to 125^oC.

Electrical Specifications $T_A = 25^oC$, Unless Otherwise Specified

Soldering Precautions

The soldering process creates a considerable thermal stress on any semiconductor component. The melting temperature of solder is higher than the maximum rated temperature of the device. The amount of time the device is heated to a high temperature should be minimized to assure device reliability. Therefore, the following precautions should always be observed in order to minimize the thermal stress to which the devices are subjected.

1. Always preheat the device.
2. The delta temperature between the preheat and soldering should always be less than 100°C. Failure to preheat the device can result in excessive thermal stress which can damage the device.
3. The maximum temperature gradient should be less than 5°C per second when changing from preheating to soldering.
4. The peak temperature in the soldering process should be at least 30°C higher than the melting point of the solder chosen.
5. The maximum soldering temperature and time must not exceed 260°C for 10 seconds on the leads and case of the device.
6. After soldering is complete, the device should be allowed to cool naturally for at least three minutes, as forced cooling will increase the temperature gradient and may result in latent failure due to mechanical stress.
7. During cooling, mechanical stress or shock should be avoided.
