

75A, 30V, 0.011 Ohm, N-Channel, Logic Level UltraFET Power MOSFETs

These N-Channel power MOSFETs are manufactured using the innovative UltraFET™ process. This advanced process technology

achieves the lowest possible on-resistance per silicon area, resulting in outstanding performance. This device is capable of withstanding high energy in the avalanche mode and the diode exhibits very low reverse recovery time and stored charge. It was designed for use in applications where power efficiency is important, such as switching regulators, switching converters, motor drivers, relay drivers, low-voltage bus switches, and power management in portable and battery-operated products.

Formerly developmental type TA76132.
