

## General Description

The PVT412 Series Photovoltaic Relay is a single-pole, normally open solid-state relay that can replace electromechanical relays in many applications. It utilizes International Rectifier's proprietary HEXFET power MOSFET as the output switch, driven by an integrated circuit photovoltaic generator of novel construction. The output switch is controlled by radiation from a GaAlAs light emitting diode (LED) which is optically isolated from the photovoltaic generator.

These SSRs are specifically designed for worldwide telecom applications. PVT412L employs an active current-limiting circuitry enabling it to pass FCC Part 68 and other regulatory agency current surge requirements when overvoltage protection is provided. PVT412 does not employ the current-limiting circuitry and offers lower on-state resistance.

Series PVT412 Relays are packaged in a 6-lead molded DIP package with either through-hole or surface mount ('gull-wing') terminals. It is available in standard plastic shipping tubes or on tape-and-reel. Please refer to part identification information opposite.

## Applications

- On/Off Hook switch
- Dial-Out relay
- Ring relay
- General switching

## PVT412L Features

- HEXFET Power MOSFET output
- Bounce-free operation
- 4,000 VRMS I/O isolation
- Load current limiting
- Linear AC/DC operation
- Solid-State reliability
- UL recognized and CSA certified

## Part Identification

PVT412L	current limit, through-hole
PVT412LS	current limit, surface-mount
PVT412LS-T	current limit, surface-mount, Tape and Reel
PVT412	no current limit, through-hole
PVT412S	no current limit, surface-mount
PVT412S-T	no current limit, surface-mount, Tape and Reel

### Case Outline

Dimensions in millimeters (inches)

### Mechanical Specifications:

1. Dimensioning and tolerancing per ANSI Y14.5M-1982
2. Controlling Dimension: Inch
4. Dimension does not include mold protrusions. Mold protrusions shall not exceed 0.25 (.010).

**Note:** PVT412L relays will pass FCC Part 68 surge current requirements operating into rated load or short circuit when protected from overvoltage by a transient protection device such as a 175 VRMS rated MOV placed between the tip and ring terminals of the telephone line or across the output of the relay. PVT412 relays will pass the above FCC Part 68 requirements when overcurrent protection devices (such as fusible resistors) are placed in series with tip and ring lines in addition to the aforementioned overvoltage protection. Consult factory for additional information.
