### IS6MC256K FUNCTIONAL BLOCK DIAGRAM

### DESCRIPTION

The *ISSI* IS6MC256K is a secondary cache module designed for use with Intel Pentium CPU-based systems. This *ISSI* synchronous cache module uses IS61C632 32K x 32 pipelined synchronous burst static RAMs which are mounted on a multilayer board. In addition, this module uses a single 5V 8-bit wide CMOS SRAM for the tag.

On-board logic, 3.3V data RAM, and a 5V tag RAM provide an exact interface between the module and the PC chipset. Five PD (presence detect) input pins allow the system to determine the particular cache configuration.

*ISSI's* CELP 160-lead module provides space savings that allows the customer to design additional functions into the system or to shrink the size of the motherboard.

All inputs and outputs are TTL-compatible. Multiple GND pins and on-board decoupling capacitors provide maximum protection from noise.
