## feATURES

- Differential or Single-Ended Gain Block
- Wide Supply Range 3V to 12.6V
- Output Swings Rail-to-Rail
- Input Common Mode Range Includes Ground
- 600V/us Slew Rate
- -3 dB Bandwidth $=75 \mathrm{MHz}, A_{V}= \pm 2$
- CMRR at $10 \mathrm{MHz}:>60 \mathrm{~dB}$
- Output Swings Rail-to-Rail
- Specified on $3.3 \mathrm{~V}, 5 \mathrm{~V}$ and $\pm 5 \mathrm{~V}$ Supplies
- High Output Drive: $\pm 70 \mathrm{~mA}$
- Power Shutdown to $300 \mu \mathrm{~A}$
- Operating Temperature Range: $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$
- Tiny $3 \mathrm{~mm} \times 3 \mathrm{~mm} \times 1 \mathrm{~mm}$ DFN Package

## APPLICATIONS

- Differential to Single-Ended Conversion
- Video Line Driver
- Automotive Displays
- RGB Amplifiers
- Coaxial Cable Drivers
- Low Voltage High Speed Signal Processing

## DESCRIPTION

July 2003

The $\mathrm{LT}^{\circledR} 6552$ is a video difference amplifier optimized for low voltage single supply operation. This versatile amplifier features uncommitted high input impedance ( + ) and $(-)$ inputs and can be used in differential or single-ended configurations. A second set of inputs gives gain adjustment and DC control to the differential amplifier.

On a single 3.3 V supply, the input voltage range extends from ground to 1.3 V and the output can swing to within 400 mV of the supply voltage while driving a $150 \Omega$ load. The LT6552 features 75MHz - 3dB bandwidth, $600 \mathrm{~V} / \mu \mathrm{s}$ slew rate, and $\pm 70 \mathrm{~mA}$ output current making it ideal for driving cables directly. The LT6552 maintains its performance for supplies from 3 V to 12.6 V and is fully specified at $3.3 \mathrm{~V}, 5 \mathrm{~V}$ and $\pm 5 \mathrm{~V}$ supplies. The shutdown feature reduces power dissipation to less than 1 mW and allows multiple amplifiers to drive the same cable.

The LT6552 is available in the 8-pin SO package as well as a tiny, dual fine pitch leadless package (DFN). The device is specified over the commercial and industrial temperature range.

| :--- | :--- | :--- | :---: | :---: | :---: |
|  | Shutdown Pin Current | $V_{\overline{S H D N}}=-4.5 \mathrm{~V}$ | $\bullet$ | 85 | 250 |
|  |  | $V_{\overline{S H D N}}=4.7$ | $\mu \mathrm{~A}$ |  |  |
|  |  | $V_{\overline{S H D N}}$ from -4.5 V to 4.7 V | 3 | 10 | $\mu \mathrm{~A}$ |
| $\mathrm{t}_{\text {ON }}$ | Turn-On Time | $V_{\overline{S H D N}}$ from 4.7 V to -4.5 V |  | 200 | ns |
| $\mathrm{t}_{\text {OFF }}$ | Turn-Off Time |  | 400 | ns |  |

Note 1: Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.
Note 2: The inputs are protected from ESD with diodes to the supplies. Note 3: A heat sink may be required to keep the junction temperature below absolute maximum.
Note 4: The LT6552C/LT6552I are guaranteed functional over the temperature range of $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$.
Note 5: The LT6552C is guaranteed to meet specified performance from $0^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ and is designed, characterized and expected to meet specified performance from $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$, but is not tested or QA sampled at these temperatures. The LT6552l is guaranteed to meet specified performance from $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$.

Figure 1. 3.3V, 5V DC Test Circuit

Note 6: When $R_{L}=1 k$ is specified, the load resistor is $R_{F}+R_{G}$, but when $R_{L}=150 \Omega$ or $R_{L}=75 \Omega$ is specified, then an additional resistor of that value is added to the output.
Note 7: $V_{\text {OS }}$ measured at the output (Pin 6) is the contribution from both input pairs and is input referred.
Note 8: Minimum supply is guaranteed by the PSRR test.
Note 9: Full power bandwidth is calculated from the slew rate.

$$
\mathrm{FPBW}=\mathrm{SR} / 2 \pi \mathrm{~V} p
$$

Note 10: $\mathrm{V}_{S}=3.3 \mathrm{~V}$ limits are guaranteed by correlation to $\mathrm{V}_{\mathrm{S}}=5 \mathrm{~V}$ and $\pm 5 \mathrm{~V}$ tests.

Figure 2. $\pm 5 \mathrm{~V}$ DC Test Circuit

## APPLICATIONS INFORMATION

The LT6552 is a video difference amplifier with two pairs of high impedance inputs. The primary purpose of the LT6552 is to convert high frequency differential signals into a single-ended output, while rejecting any common mode noise. In the simplest configuration, one pair of inputs are connected to the incoming differential signal, while the other pair of inputs are used to set the amplifier gain and DC level. The device will operate on either single or dual supplies and has an input common mode range which includes the negative supply. The common mode rejection ratio is greater than 60 dB at 10 MHz .

Figure 3 shows the single supply connection. The amplifier gain is set by a feedback network from the output to Pin 8 (FB). A DC signal applied to pin 1 (REF) establishes the output quiescent voltage and the differential signal is applied to Pins 2 and 3.
Figure 4 shows several other connections using dual supplies. In each case, the amplifier gain is set by a feedback network from the output to Pin 8 (FB).

## APPLICATIONS INFORMATION

## Amplifier Characteristics

Figure 5 shows a simplified schematic of the LT6552. There are two input stages, the first one consists of transistors Q1 to Q8 for the (+) and ( - ) inputs while the second input stage consists of transistors Q9 to Q16 for the reference and feedback inputs. This topology provides high slew rates at low supply voltages. The input common mode range extends from ground to typically 1.75 V from $\mathrm{V}_{\mathrm{CC}}$, and is limited by $2 \mathrm{~V}_{\text {BE's }}$ plus a saturation voltage of current sources 11-I4. Each input stage drives the degeneration resistors of PNP and NPN current mirrors, Q17 to Q20, that convert the differential signals into a singleended output. The complementary drive generator supplies current to the output transistors that swing from rail-to-rail.

Figure 3

The current generated through R1 or R2, divided by the capacitor CM, determines the slew rate. Note that this current, and hence the slew rate are proportional to the magnitude of the input step. The input step equals the output step divided by the closed loop gain. The highest slew rates are therefore obtained in the lowest gain configurations.

## ESD

The LT6552 has reverse-biased ESD protection diodes on all inputs and outputs, as shown in Figure 5. If these pins are forced beyond either supply, unlimited current will flow through these diodes. If the current is transient in nature and limited to 100 mA or less, no damage to the device will occur.

## DD Package

8-Lead Plastic DFN ( $3 \mathrm{~mm} \times 3 \mathrm{~mm}$ )
(Reference LTC DWG \# 05-08-1698)

RECOMMENDED SOLDER PAD PITCH AND DIMENSIONS

NOTE:

1. DRAWING TO BE MADE A JEDEC PACKAGE OUTLINE MO-229 VARIATION OF (WEED-1) 2. ALL DIMENSIONS ARE IN MILLIMETERS
. DIMENSIONS OF EXPOSED PAD ON BOTTOM OF PACKAGE DO NOT INCLUDE MOLD FLASH. MOLD FLASH, IF PRESENT, SHALL NOT EXCEED 0.15 mm ON ANY SIDE 4. EXPOSED PAD SHALL BE SOLDER PLATED

S8 Package
8-Lead Plastic Small Outline (Narrow . 150 Inch)
(Reference LTC DWG \# 05-08-1610)

## RELATGD PARTS

| PART NUMBER | DESCRIPTION | COMMENTS |
| :--- | :--- | :--- |
| LT1193 | Av = 2 Video Difference Amp | 80 MHz BW, 500V/ $\mu \mathrm{s}$, Shutdown |
| LT1675 | RGB Multiplexer with Current Feedback Amplifiers | -3 dB Bandwidth = 250MHz, 100MHz Pixel Switching |
| LT1809/LT1810 | Single/Dual 180MHz, Rail-to-Rail Input and Output Amplifiers | $350 \mathrm{~V} / \mu \mathrm{s}$ Slew Rate, Shutdown, Low Distortion -90dBc at 5MHz |
| LT6550/LT6551 | $3.3 V$ Triple and Quad Video Amplifiers | Internal Gain of 2, 110MHz -3dB Bandwidth, <br> Input Common Modes to Ground |
