## +5V, +10V Precision Voltage References

REF01/REF02

**General Description**

The REF01 and REF02 are precision voltage references that are pretrimmed to within  $\pm 3\%$  of +10V and +5V, respectively. Both references feature excellent temperature stability (as low as 8.5 ppm/ $^{\circ}\text{C}$  worst case), low current drain, and low noise. The REF02 also provides a TEMP pin whose output voltage varies linearly with temperature, making this device suitable for a wide variety of temperature-sensing and control applications. Both devices are available from Maxim in the space-saving SO package, as well as in the standard 8-pin TO-99 and MINI-DIP packages.

**Features**

- ◆ Pretrimmed to +5V, +10V  $\pm 0.3\%$
- ◆ Excellent Temperature Stability: 3 ppm/ $^{\circ}\text{C}$
- ◆ Low Noise: 10  $\mu\text{Vp-p}$  (REF02)
- ◆ Low Supply Current: 1.4mA max
- ◆ Short-Circuit Proof
- ◆ Linear Temperature Transducer O/P (REF02)

**Ordering Information**

PART	TEMP. RANGE	MAX TEMPCO (ppm/ $^{\circ}\text{C}$ )	INITIAL ERROR (mV)	PIN-PACKAGE
REF01EP	0°C to +70°C	8.5	$\pm 30$	8 Plastic DIP

## ABSOLUTE MAXIMUM RATINGS—REF01

Input Voltage							
REF01, A, E, H, All DICE	.....	40V					
REF01C	.....	30V					
Power Dissipation							
T099 (J) (derate at 7.1mW/°C above 80°C)	.....	500mW					
CERDIP (2) (derate at 6.7mW/°C above 75°C)	.....	500mW					
Plastic Dip (P) (derate at 5.6mW/°C above 36°C)	.....	500mW					
Small Outline (S) (derate at 5.0mW/°C above 55°C)	.....	300mW					
Output Short-Circuit Duration (to ground or VIN)	.....	Indefinite					

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS—REF01

**Notes:** See previous page.

### Output Adjustment

The REF01 trim terminal can be used to adjust the voltage over a  $10V \pm 300mV$  range. This feature allows the system designer to trim system errors by setting the reference to a voltage other than 10V, including 10.240V for binary applications (see the *Typical Operating Circuit* section).

Adjustment of the output does not significantly affect the temperature performance of the device. The temperature coefficient change is approximately  $0.7ppm/\text{ }^\circ C$  for 100mV of output adjustment.

Notes: See previous page.

### Output Adjustment

The REF02 trim terminal can be used to adjust the output voltage over a  $5V \pm 300mV$  range. This feature allows the system designer to trim system errors by setting the reference to a voltage other than 5V (refer to the *Typical Operating Circuit* section).

Adjustment of the output does not significantly affect the temperature performance of the device. Typically, the temperature coefficient change is  $0.7ppm/\text{ }^\circ C$  for 100mV of output adjustment.

### Temperature Voltage Output

The REF02 provides a temperature-dependent output voltage on the TEMP pin. This voltage is proportional to the absolute temperature, and has a scale factor of approximately  $2.1mV/\text{ }^\circ C$  (Figure 2).

$$\text{Output Voltage} = 2.1(T + 273)mV$$

where  $T$  = Temperature in  $^\circ C$
