### GENERAL DESCRIPTION

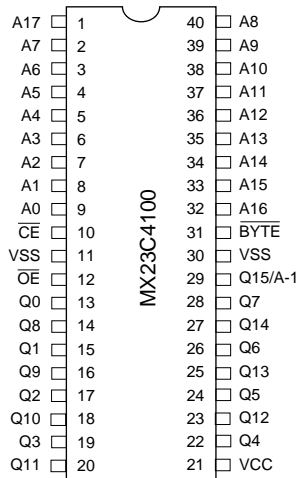

The MX23C4100 is a 5V only, 4M-bit, Read Only Memory. It is organized as 512Kx8 bits (byte mode) or as 256Kx16 bit (word mode) depending on BYTE (pin 31) voltage level. MX23C4100 has a static standby mode, and has an access time of 100/120/150/200ns. It is designed to be compatible with all microprocessors and similar applications in which high performance, large bit storage and simple interfacing are important design considerations.

MX23C4100 offers automatic power-down, with power-down controlled by the chip enable ( $\overline{CE}$ ) input. When  $\overline{CE}$  is not selected, the device automatically powers down and remains in a low-power standby mode as long as  $\overline{CE}$  stays in the unselected mode.

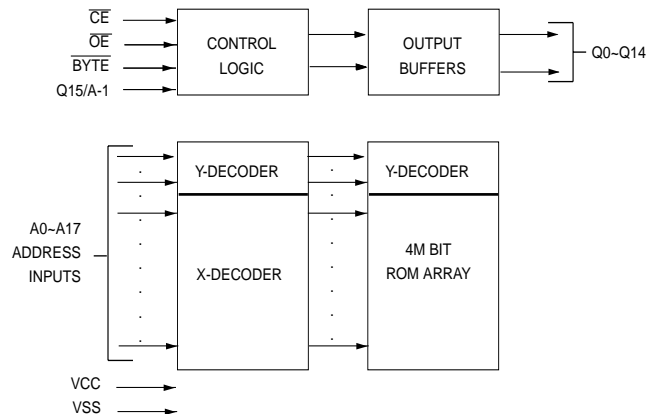

The  $\overline{OE}$  input as well as  $\overline{OE}$  input may be programmed active Low.
