### **Test Equipment**

The strictly defined 1300 nm wavelength and high power is ideal for test equipment applications. It is packaged in a hermetically sealed can for high reliability and maximum resistance to harsh operating environments. The double-lens optical system results in optimum coupling of power into the fiber.

### **Emitter or Detector in ST® Package**

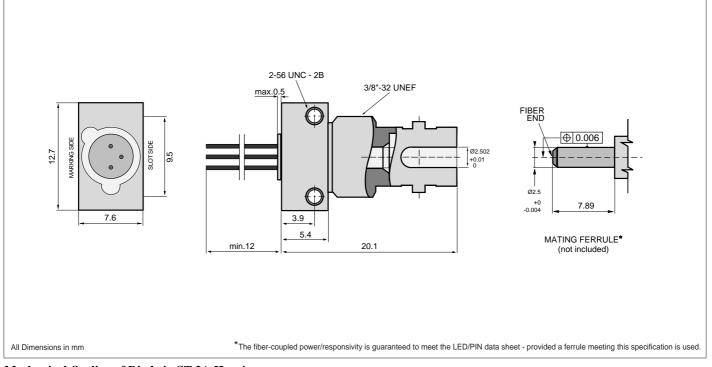

Mitel emitters and detectors can be provided in this low-profile ST® package. The device is electrically isolated from the ST<sup>®</sup> receptacle to facilitate electrical connection. And optimum fiber-coupled power or responsivity is ensured by active alignment against the fiber.

Note 1: Temperature range can be extended to -55° to +125°C on request.

Note 2: Add R<sub>thic</sub> for emitter or detector to estimate the total thermal resistance.

**Emitter or Detector in Pigtail Package** 

Mitel emitters and detectors can be provided in this pigtail package with a wide selection of fiber types. The device is electrically isolated from the pigtail receptacle to facilitate electrical connection. And optimum fiber-coupled power or responsivity is ensured by active alignment against the fiber. A special design maximizes the return loss for detectors in this package.
