16 x 4 Bit Register File (RAM)

The MC10H145 is a 16 x 4 bit register file. The active-low chip select allows easy expansion.

<u>The operating mode of the register file is controlled by the WE input. When</u> WE is "low" the device is in the write mode, the outputs are "low" and the data present at D_n input is stored at the selected address, when WE is "high," the device is in the read mode — the data state at the selected location is present at the Q_n outputs.

- Address Access Time, 4.5 ns Typical
- Power Dissipation, 700 mW Typical
- Improved Noise Margin 150 mV (Over Operating Voltage and Temperature Range)
- Voltage Compensated
- MECL 10K-Compatible

NOTE:

Each MECL 10H series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 lfpm is maintained. Outputs are terminated through a 50-ohm resistor to -2.0 volts.

NOTES: 1. Test circuit characteristics: R_T = 50 Ω, MC10H145. C_L ≤ 5.0 pF (including jig and Stray Capacitance). Delay should be derated 30 ps/pF for capacitive loads up to 50 pF.
2. The maximum Address Access Time is guaranteed to be the worst-case bit in the memory.
3. For proper use of MECL in a system environment, consult MECL System Design Handbook.
