## Dual 4-Channel Analog Data Selector

The MC14529B analog data selector is a dual 4-channel or single 8 -channel device depending on the input coding. The device is suitable for digital as well as analog application, including various one-of-four and one-of-eight data selector functions. Since the device has bidirectional analog characteristics it can also be used as a dual binary to 1 -of-4 or a binary to 1 -of- 8 decoder.

- Data Paths Are Bidirectional
- 3-State Outputs
- Linear "On" Resistance
- Supply Voltage Range = 3.0 Vdc to 18 Vdc
- Capable of Driving Two Low-power TTL Loads or One Low-power Schottky TTL Load over the Rated Temperature Range.
MAXIMUM RATINGS* (Voltages Referenced to $\mathrm{V}_{\mathrm{SS}}$ )

| Symbol | Parameter | Value | Unit |
| :---: | :--- | :---: | :---: |
| $\mathrm{V}_{\mathrm{DD}}$ | DC Supply Voltage | -0.5 to +18.0 | V |
| $\mathrm{~V}_{\text {in }}, \mathrm{V}_{\text {out }}$ | Input or Output Voltage (DC or Transient) | -0.5 to $\mathrm{V}_{\mathrm{DD}}+0.5$ | V |
| $\mathrm{I}_{\text {in }}, I_{\text {out }}$ | Input or Output Current (DC or Transient) <br> per Pin | $\pm 10$ | mA |
| $\mathrm{P}_{\mathrm{D}}$ | Power Dissipation, per Package $\dagger$ | 500 | mW |
| $\mathrm{~T}_{\text {Stg }}$ | Storage Temperature | -65 to +150 | ${ }^{\circ} \mathrm{C}$ |
| $\mathrm{T}_{\mathrm{L}}$ | Lead Temperature (8-Second Soldering) | 260 | ${ }^{\circ} \mathrm{C}$ |

* Maximum Ratings are those values beyond which damage to the device may occur. $\dagger$ Temperature Derating:

Plastic "P and D/DW" Packages: $-7.0 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ From $65^{\circ} \mathrm{C}$ To $125^{\circ} \mathrm{C}$
Ceramic "L" Packages: - $12 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ From $100^{\circ} \mathrm{C}$ To $125^{\circ} \mathrm{C}$
TRUTH TABLE ( $\mathrm{X}=$ Don't Care)

| STX | STY | B | A | Z | W | Dual 4-Channel Mode <br> 2 Outputs |

| 0 | 1 | 1 | 0 |  |  |  |
| 0 | 1 | 1 | 1 |  |  |  |
| 0 | 0 | X | X | $\begin{array}{r} \mathrm{H} \\ \text { Impe } \end{array}$ | ance |  |

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, $\mathrm{V}_{\text {in }}$ and $\mathrm{V}_{\text {out }}$ should be constrained to the range $\mathrm{V}_{\mathrm{SS}} \leq\left(\mathrm{V}_{\text {in }}\right.$ or $\left.\mathrm{V}_{\text {out }}\right) \leq \mathrm{V}_{\mathrm{DD}}$.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either $V_{S S}$ or $V_{D D}$ ). Unused outputs must be left open.

\#Data labelled "Typ" is not to be used for design purposes, but is intended as an indication of the IC's potential performance.
** For voltage drops across the switch $\left(\Delta V_{\text {Switch }}\right)>600 \mathrm{mV}$ ( $>300 \mathrm{mV}$ at high temperature), excessive $\mathrm{V}_{\text {DD }}$ current may be drawn; i.e. the current out of the switch may contain both $V_{D D}$ and switch input components. The reliability of the device will be unaffected unless the Maximum Ratings are exceeded. (See first page of this data sheet.)
