

High Voltage PNP Silicon Power Transistors

... designed for line operated audio output amplifier, SWITCHMODE power supply drivers and other switching applications.

- 300 V to 400 V (Min) — $V_{CEO(sus)}$
- 1.0 A Rated Collector Current
- Popular TO-220 Plastic Package
- PNP Complements to the TIP47 thru TIP50 Series

Figure 5. Forward Bias Safe Operating Area

There are two limitations on the power handling ability of a transistor: average junction temperature and second breakdown. Safe operating area curves indicate $I_C - V_{CE}$ limits of the transistor that must be observed for reliable operation; i.e., the transistor must not be subjected to greater dissipation than the curves indicate.

The data of Figure 5 is based on $T_{J(pk)} = 150^\circ\text{C}$; T_C is variable depending on conditions. Second breakdown pulse limits are valid for duty cycles to 10% provided $T_{J(pk)} \leq 150^\circ\text{C}$. $T_{J(pk)}$ may be calculated from the data in Figure 6. At high case temperatures, thermal limitations will reduce the power that can be handled to values less than the limitations imposed by second breakdown.
