

The MRFIC Line 2.4 GHz GaAs Downconverter

The MRFIC2401 is a GaAs low-noise amplifier and downmixer in a low-cost 16 lead plastic package designed for use in the 2.4 to 2.5 GHz Industrial-Scientific-Medical (ISM) band. The design is optimized for efficiency at 5.0 Volt operation at 2.45 GHz but is usable from 2.0 to 3.0 GHz in applications such as telemetry and Multichannel Multipoint Distribution System (MMDS) wireless cable TV systems. Performance is suitable for frequency hopping or direct sequence spread spectrum as well as single-frequency applications. LNA output and mixer input are available to allow image filtering.

- Single Supply Voltage = 5.0 Volts
- High Conversion Gain = 21 dB Typical Less Image Filter
- Low Supply Current = 9.5 mA Typical
- Low-Cost, Low Profile Plastic SOIC Package
- Available in Tape and Reel by Adding R2 Suffix to Part Number.
R2 Suffix = 2,500 Units per 16 mm, 13 inch Reel.
- Device Marking = M2401

DESIGN AND APPLICATIONS INFORMATION

The MRFIC2401 consists of a two-stage GaAs MESFET low noise amplifier and a single ended MESFET mixer. The LNA design conserves bias current through stacking of the two FETs, thus reusing the current. The mixer consists of a common gate stage driving a common source stage with the IF output being the drain of the common source stage shunted with 15 pF. The LNA output and mixer input have been separated to allow the addition of an external image filter. Such a filter, usually ceramic, is useful in improving the mixer noise figure and third order intercept performance. It also provides LO rejection to reduce the amount of LO power which may leak to the antenna. Alternatively, image trapping can be implemented at the LNA input or output with discrete or distributed components.

The design has been optimized for best performance from 2.4 to 2.5 GHz, but the device is usable with reduced performance from 2.0 to 3.0 GHz as shown in the performance curves. These curves were generated using the circuit shown in Figure 1 and performance above 2.5 GHz can be enhanced by rematching the LO input port. Matching circuit details are shown for IFs of 110 MHz, 240 MHz, and 325 MHz matched to 50 Ω and LO frequencies consistent with an RF frequency of 2.45 GHz. Customized IF matching can be accomplished by using the Equivalent IF Output circuit model shown in Figure 2. The best gain/noise figure

tradeoff match is shown in the LNA input impedance column of Table 1. The LO input impedance is shown in the same table. These numbers are derived from conjugate match measurements of the applications circuit. The LNA output and mixer input are matched to 50 Ω .

As with all RF circuitry, layout is important. Controlled impedance lines should be used at all RF ports. RF bypassing of power supply connections as close to the part as possible, while not always shown in the applications circuit, are recommended. Additional power supply "stiffening" and digital transient bypassing should be accomplished with electrolytic or tantalum capacitors.

The device can be placed in a reduced current "standby" mode by applying 5.0 Vdc to the STANDBY pin and removing the LO drive. Further current reduction "sleep" mode, is enabled by applying 0 Vdc to V_{DD}/SLEEP. This sleep mode can also be used to disable the LNA under high signal level conditions and give higher input intercept point if V_{DD} is still applied to the mixer.

EVALUATION BOARDS

Evaluation boards are available for RF Monolithic Integrated Circuits by adding a "TF" suffix to the device type. For a complete list of currently available boards and ones in development for newly introduced product, please contact your local Motorola Distributor or Sales Office.

PACKAGE DIMENSIONS

Motorola reserves the right to make changes without further notice to any products herein. Motorola makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does Motorola assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters can and do vary in different applications. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. Motorola does not convey any license under its patent rights nor the rights of others. Motorola products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the Motorola product could create a situation where personal injury or death may occur. Should Buyer purchase or use Motorola products for any such unintended or unauthorized application, Buyer shall indemnify and hold Motorola and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that Motorola was negligent regarding the design or manufacture of the part.
