C Suffix indicates Bidirectional

**NOTE 1:** TAZ are normally selected according to the reverse "Stand Off Voltage"  $V_{WM}$  which should be equal to or greater than the DC or continuous peak operating voltage level.

\*The minimum breakdown voltage as shown takes into consideration the  $\pm 1$  volt tolerance normally specified for power supply regulation on most integrated circuit manufacturers data sheets. Similar devices are available with reduced clamping voltages where tighter regulated power supply voltages are employed.
