**HF (High Function) Type  
[1-Channel (Form A) Type]**

# PhotoMOS RELAYS

## FEATURES

### 1. Controls low-level analog signals

PhotoMOS relays feature extremely low closed-circuit offset voltage to enable control of low-level analog signals without distortion.

### 2. Control with low-level input signals

### 3. Controls various types of loads such as relays, motors, lamps and solenoids.

### 4. Optical coupling for extremely high isolation

Unlike mechanical relays, the PhotoMOS relay combines LED and optoelectronic device to transfer signals using light for extremely high isolation.

### 5. Eliminates the need for a counter electromotive force protection diode in the drive circuits on the input side

### 6. Stable on resistance

### 7. Low-level off state leakage current

### 8. Eliminates the need for a power supply to drive the power MOSFET

A power supply used to drive the power MOSFET is unnecessary because of the built-in optoelectronic device. This results in easy circuit design and small PC board area.

### 9. Low thermal electromotive force (Approx. 1 µV)

## TYPICAL APPLICATIONS

- High-speed inspection machines
- Telephone equipment
- Data communication equipment
- Computer
