## ■GENERAL DESCRIPTION

NJG1309VB2 is a positive voltage supply type GaAs power amplifier MMIC designed for Digital Cordless Phone.

Gate bias and Gain control bias terminals are supplied by positive voltage.

These terminals have high-impedance characteristics.

NJG1309VB2 can reduce power consumption at receiving mode by "Standby Function".

### Notes

[1] CMOS IC negative voltage generator has Internal CR oscillator, therefor to reduction of noise, decoupling capacitor(C12) should be connected between the 20pin and the GND.

[2] Chip parts as follows should be connected to the leads of IC as near as possible.

- (1) 3pin - C1
- (2) 8pin - C2
- (3) 13pin - L1
- (4) 15pin - C3

[3] Chip parts list
