FDD READ AMPLIFIER SYSTEM

■ GENERAL DESCRIPTION

The NJM3470/3470A are monolithic read amplifier systems for obtaining digital signal from floppy disk storage.

The NJM3470/3470A are designed to get pulse output signal produced by the magnetic head amp of the input signal. They contain amplifiers, peak detector, and pulse shape circuit. They are classified two ranks by peak shift characteristic; NJM3470(5%), NJM3470A(2%)
