QUARTZ CRYSTAL OSCILLATOR

4

■ GENERAL DESCRIPTION

The NJU6361A is a C-MOS quartz crystal oscillator which consists of an oscillation amplifier, 3-stage divider, output frequency selector and inverter output buffer.

The oscillation frequency is as wide as up to 50MHz and the symmetry of 45-55% is realized over full oscillation frequency range.

The oscillation amplifier incorporates feed-back resistance and oscillation capacitors(Cg, Cd), therefore, it requires no external component except quartz crystal.

The 3-stage divider outputs f_o, $f_o/2$, $f_o/4$ and $f_o/8$ to the output frequency selector and it determined one output frequency according to the combination of two input-signal.

The inverter output buffer is C-MOS compatible and capable of 10 LSTTL driving.
