

## LM137/LM337 3-Terminal Adjustable Negative Regulators

### General Description

The LM137/LM337 are adjustable 3-terminal negative voltage regulators capable of supplying in excess of  $-1.5A$  over an output voltage range of  $-1.2V$  to  $-37V$ . These regulators are exceptionally easy to apply, requiring only 2 external resistors to set the output voltage and 1 output capacitor for frequency compensation. The circuit design has been optimized for excellent regulation and low thermal transients. Further, the LM137 series features internal current limiting, thermal shutdown and safe-area compensation, making them virtually blowout-proof against overloads.

The LM137/LM337 serve a wide variety of applications including local on-card regulation, programmable-output voltage regulation or precision current regulation. The LM137/LM337 are ideal complements to the LM117/LM317 adjustable positive regulators.

### Features

- Output voltage adjustable from  $-1.2V$  to  $-37V$
- 1.5A output current guaranteed,  $-55^{\circ}C$  to  $+150^{\circ}C$
- Line regulation typically 0.01%/V
- Load regulation typically 0.3%
- Excellent thermal regulation, 0.002%/W

- 77 dB ripple rejection
- Excellent rejection of thermal transients
- 50 ppm/ $^{\circ}C$  temperature coefficient
- Temperature-independent current limit
- Internal thermal overload protection
- P\* Product Enhancement tested
- Standard 3-lead transistor package
- Output is short circuit protected

### LM137 Series Packages and Power Capability

Device	Package	Rated Power Dissipation	Design Load Current
LM137/337	TO-3 (K)	20W	1.5A
	TO-39 (H)	2W	0.5A
LM337	TO-220 (T)	15W	1.5A
LM337	SOT-223 (MP)	2W	1A

### Typical Applications

Full output current not available at high input-output voltages

$$-V_{OUT} = -1.25V \left( 1 + \frac{R2}{120} \right) + (-I_{ADJ} \times R2)$$

†C1 = 1  $\mu F$  solid tantalum or 10  $\mu F$  aluminum electrolytic required for stability

\*C2 = 1  $\mu F$  solid tantalum is required only if regulator is more than 4" from power-supply filter capacitor

Output capacitors in the range of 1  $\mu F$  to 1000  $\mu F$  of aluminum or tantalum electrolytic are commonly used to provide improved output impedance and rejection of transients

### Comparison between SOT-223 and D-Pak (TO-252) Packages

## Absolute Maximum Ratings (Notes 1, 4)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/ Distributors for availability and specifications.

Power Dissipation	Internally Limited
Input-Output Voltage Differential	40V
Operating Junction Temperature Range	-55°C to +150°C
LM137	

LM337	0°C to +125°C
Storage Temperature	-65°C to +150°C
Lead Temperature (Soldering, 10 sec.)	300°C
Plastic Package (Soldering, 4 sec.)	260°C
ESD Rating	2k Volts

## Electrical Characteristics

(Note 1)

Parameter	Conditions	LM137			LM337			Units
		Min	Typ	Max	Min	Typ	Max

Thermal Resistance, Junction to Ambient (No Heat Sink)	H Package K Package T Package MP Package		140 35			140 35		$^\circ\text{C/W}$ $^\circ\text{C/W}$ $^\circ\text{C/W}$ $^\circ\text{C/W}$

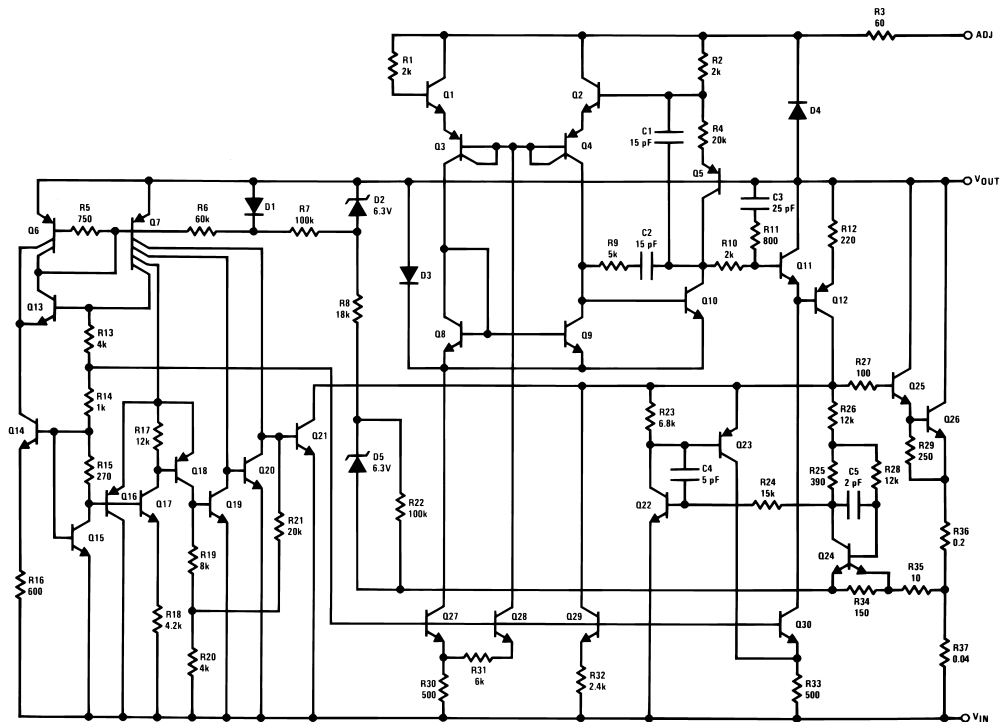

**Note 1:** Unless otherwise specified, these specifications apply  $-55^\circ\text{C} \leq T_j \leq +150^\circ\text{C}$  for the LM137,  $0^\circ\text{C} \leq T_j \leq +125^\circ\text{C}$  for the LM337;  $V_{\text{IN}} - V_{\text{OUT}} = 5\text{V}$ ; and  $I_{\text{OUT}} = 0.1\text{A}$  for the TO-39 package and  $I_{\text{OUT}} = 0.5\text{A}$  for the TO-3, SOT-223 and TO-220 packages. Although power dissipation is internally limited, these specifications are applicable for power dissipations of 2W for the TO-39 and SOT-223 (see Application Hints), and 20W for the TO-3, and TO-220.  $I_{\text{MAX}}$  is 1.5A for the TO-3, SOT-223 and TO-220 packages, and 0.2A for the TO-39 package.

**Note 2:** Regulation is measured at constant junction temperature, using pulse testing with a low duty cycle. Changes in output voltage due to heating effects are covered under the specification for thermal regulation. Load regulation is measured on the output pin at a point  $\frac{1}{8}$ " below the base of the TO-3 and TO-39 packages.

**Note 3:** Selected devices with tightened tolerance reference voltage available.

**Note 4:** Refer to RETS137H drawing for LM137H or RETS137K drawing for LM137K military specifications.

## Schematic Diagram

DS009067-2

## Thermal Regulation

When power is dissipated in an IC, a temperature gradient occurs across the IC chip affecting the individual IC circuit components. With an IC regulator, this gradient can be especially severe since power dissipation is large. Thermal regulation is the effect of these temperature gradients on output voltage (in percentage output change) per Watt of power change in a specified time. Thermal regulation error is independent of electrical regulation or temperature coefficient, and occurs within 5 ms to 50 ms after a change in power dissipation. Thermal regulation depends on IC layout as well as electrical design. The thermal regulation of a voltage regulator is defined as the percentage change of  $V_{OUT}$ , per Watt, within the first 10 ms after a step of power is applied. The LM137's specification is 0.02%/W, max.

DS009067-3

LM137,  $V_{OUT} = -10V$   
 $V_{IN} - V_{OUT} = -40V$   
 $I_{IL} = 0A \rightarrow 0.25A \rightarrow 0A$   
 Vertical sensitivity, 5 mV/div

FIGURE 1.

In Figure 1, a typical LM137's output drifts only 3 mV (or 0.03% of  $V_{OUT} = -10V$ ) when a 10W pulse is applied for 10 ms. This performance is thus well inside the specification limit of  $0.02\%/W \times 10W = 0.2\%$  max. When the 10W pulse is ended, the thermal regulation again shows a 3 mV step at the LM137 chip cools off. Note that the load regulation error of about 8 mV (0.08%) is additional to the thermal regulation error. In Figure 2, when the 10W pulse is applied for 100 ms, the output drifts only slightly beyond the drift in the first 10 ms, and the thermal error stays well within 0.1% (10 mV).

## Thermal Regulation (Continued)

LM137,  $V_{OUT} = -10V$   
 $V_{IN} - V_{OUT} = -40V$   
 $I_L = 0A \rightarrow 0.25A \rightarrow 0A$   
 Horizontal sensitivity, 20 ms/div

## Application Hints

When a value for  $\theta_{(H-A)}$  is found using the equation shown, a heatsink must be selected that has a value that is less than or equal to this number.

### HEATSINKING SOT-223 PACKAGE PARTS

The SOT-223 ("MP") packages use a copper plane on the PCB and the PCB itself as a heatsink. To optimize the heat sinking ability of the plane and PCB, solder the tab of the package to the plane.

Figures 3, 4 show the information for the SOT-223 package. Figure 4 assumes a  $\theta_{(J-A)}$  of 75°C/W for 1 ounce copper and 51°C/W for 2 ounce copper and a maximum junction temperature of 125°C.

## Application Hints (Continued)

**FIGURE 3.  $\theta_{(J-A)}$  vs Copper (2 ounce) Area for the SOT-223 Package**

**FIGURE 4. Maximum Power Dissipation vs  $T_{\text{AMB}}$  for the SOT-223 Package**

Please see AN1028 for power enhancement techniques to be used with the SOT-223 package.

## Typical Applications

DS009067-9

Full output current not available at high input-output voltages

\*The 10  $\mu\text{F}$  capacitors are optional to improve ripple rejection

### Current Regulator

DS009067-11

$$I_{\text{OUT}} = \frac{1.250\text{V}}{R1}$$

$$*0.8\Omega \leq R1 \leq 120\Omega$$

### Negative Regulator with Protection Diodes

DS009067-13

\*When  $C_L$  is larger than 20  $\mu\text{F}$ , D1 protects the LM137 in case the input supply is shorted

\*\*When C2 is larger than 10  $\mu\text{F}$  and  $-V_{\text{OUT}}$  is larger than -25V, D2 protects the LM137 in case the output is shorted

## Typical Applications (Continued)

### -5.2V Regulator with Electronic Shutdown\*

DS009067-10

\*Minimum output  $\cong -1.3V$  when control input is low

### High Stability -10V Regulator

DS009067-14

### Adjustable Current Regulator

DS009067-12

$$I_{OUT} = \left( \frac{1.5V}{R1} \right) \pm 15\% \text{ adjustable}$$

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
