

## LM123/LM323A/LM323 3-Amp, 5-Volt Positive Regulator

### General Description

The LM123 is a three-terminal positive regulator with a pre-set 5V output and a load driving capability of 3 amps. New circuit design and processing techniques are used to provide the high output current without sacrificing the regulation characteristics of lower current devices.

The LM323A offers improved precision over the standard LM323. Parameters with tightened specifications include output voltage tolerance, line regulation, and load regulation.

The 3 amp regulator is virtually blowout proof. Current limiting, power limiting, and thermal shutdown provide the same high level of reliability obtained with these techniques in the LM109 1 amp regulator.

No external components are required for operation of the LM123. If the device is more than 4 inches from the filter capacitor, however, a 1  $\mu$ F solid tantalum capacitor should be used on the input. A 0.1  $\mu$ F or larger capacitor may be used on the output to reduce load transient spikes created by fast switching digital logic, or to swamp out stray load capacitance.

An overall worst case specification for the combined effects of input voltage, load currents, ambient temperature, and power dissipation ensure that the LM123 will perform satisfactorily as a system element.

For applications requiring other voltages, see LM150 series adjustable regulator data sheet.

Operation is guaranteed over the junction temperature range  $-55^{\circ}\text{C}$  to  $+150^{\circ}\text{C}$  for LM123,  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$  for LM323A, and  $0^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$  for LM323. A hermetic TO-3 package is used for high reliability and low thermal resistance.

### Features

- Guaranteed 1% initial accuracy (A version)
- 3 amp output current
- Internal current and thermal limiting
- 0.01 $\Omega$  typical output impedance
- 7.5V minimum input voltage
- 30W power dissipation
- P+ Product Enhancement tested

## LM323A/LM323 Electrical Characteristics (Note 2) (Continued)

**Note 1:** "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits.

**Note 2:** Unless otherwise noted, specifications apply for  $-55^{\circ}\text{C} \leq T_J \leq +150^{\circ}\text{C}$  for the LM123,  $-40^{\circ}\text{C} \leq T_J \leq +125^{\circ}\text{C}$  for the LM323A, and  $0^{\circ}\text{C} \leq T_J \leq +125^{\circ}\text{C}$  for the LM323. Although power dissipation is internally limited, specifications apply only for  $P \leq 30\text{W}$ .

**Note 3:** Without a heat sink, the thermal resistance of the TO-3 package is about  $35^{\circ}\text{C/W}$ . With a heat sink, the effective thermal resistance can only approach the specified values of  $2^{\circ}\text{C/W}$ , depending on the efficiency of the heat sink.

**Note 4:** Load and line regulation are specified at constant junction temperature. Pulse testing is required with a pulse width  $\leq 1\text{ ms}$  and a duty cycle  $\leq 5\%$ .

**Note 5:** Refer to RETS123K drawing for LM123K military specifications.

**Note 6:** Human body model,  $1.5\text{ k}\Omega$  in series with  $100\text{ pF}$ .

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
