NTE6885 thru NTE6888 Integrated Circuit Hex 3-State Buffer/Inverter

Description:

The NTE6885 thru NTE6888 series of devices combines three features usually found desirable in bus-oriented systems: 1) High impedance logic inputs insure that these devices do not seriously load the bus; 2) Three-state logic configuration allows buffers not being utilized to be effectively removed from the bus; 3) Schottky technology allows high-speed operation.

While the NTE6885 to NTE6888 are all buffers, the devices differ in that the NTE6885 (non-inverting) and the NTE6886 (inverting) provide a two-input Enable which controls all six buffers, while the NTE6887 (non-inverting) and the NTE6888 (inverting) provide two Enable inputs; one controlling four buffers and the other controlling the remaining two buffers.

These units are well-suited for Address buffers on the M6800 or similar microprocessor application.

Features:

- High Speed: 8.0ns (Typ)
- Three-State Logic Configuration
- Single +5V Power Supply Requirement
- Compatible with 74LS Logic or 6800 Microprocessor Systems
- High Impedance PNP Inputs Assure Minimal Loading of the Bus

Absolute Maximum Ratings: ($T_A = +25^\circ\text{C}$ unless otherwise specified for ALL devices)

Power Supply Voltage, V_{CC}	8.0V
Input Voltage, V_I	5.5V
Operating Ambient Temperature Range, T_A	0 to $+75^\circ\text{C}$
Storage Temperature Range, T_{stg}	-55° to $+150^\circ\text{C}$
Operating Junction Temperature, T_J	$+150^\circ\text{C}$

Electrical Characteristics: ($0^\circ\text{C} \leq T_A \leq 75^\circ\text{C}$ and $4.75\text{V} \leq V_{CC} \leq 5.25\text{V}$ unless otherwise specified for ALL devices)
