

# Dual J-K Master-Slave Flip-Flop

The MC10135 is a dual master-slave dc coupled J-K flip-flop. Asynchronous set (S) and reset (R) are provided. The set and reset inputs override the clock.

A common clock is provided with separate J-K inputs. When the clock is static, the J-K inputs do not effect the output.

The output states of the flip-flop change on the positive transition of the clock.

$P_D = 280 \text{ mW typ/pkg (No Load)}$   
 $f_{Tog} = 140 \text{ MHz typ}$   
 $t_{pd} = 3.0 \text{ ns typ}$   
 $t_r, t_f = 2.5 \text{ ns typ (20\%–80\%)}$

Each MECL 10,000 series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 linear fpm is maintained. Outputs are terminated through a 50-ohm resistor to -2.0 volts. Test procedures are shown for only one gate. The other gates are tested in the same manner.
