Description

HCT802 offers an N-Channel and P-Channel MOS transistor in a hermetic ceramic surface mount package. The devices used are similar to industry standards 2N6661 N-Channel device and VP1008 P-Channel device. These two enhancement mode MOSFETS are particularly well matched for V_{DS} , $I_{DS(on)}$, $R_{DS(on)}$ and G_{fs} .

Order HCT802TX for processing per MIL-PRF-19500. Typical screening and lot acceptance tests are provided on page 13-4. TX products receive a V_{GS} HTRB at 16 V for 48 hrs. at 150° C and a V_{DS} HTRB at 72 V for 160 hrs. at 150° C.

Absolute Maximum Ratings

Drain-Source Voltage	90 V
Gate-Source Voltage	±20 V
Drain Current (Limited by T_j max)	N-Channel 2 A
	P-Channel 1.1 A
Operating and Storage Temperature	-55° C to +150° C

Power Dissipation

$T_A = 25^\circ C$ (Both devices equally driven)	0.5 W Total
$T_S = 25^\circ C$ (Both devices equally driven)	1.5 W Total ⁽¹⁾

(T_s = Substrate that the package is soldered to)

Notes

(1) This rating is provided as an aid to designers. It is dependent upon mounting material and methods and is not measureable as an outgoing test.
