### Product Description

Pericom Semiconductor's PI5V series of mixed signal video circuits are produced using the Company's advanced CMOS low power technology achieving industry leading performance.

The PI5V331 is a true bidirectional Dual 4-channel multiplexer/demultiplexer that is recommended for both S-Video or composite video switching applications. The VideoSwitch™ can be driven from a current output RAMDAC or voltage output composite video source.

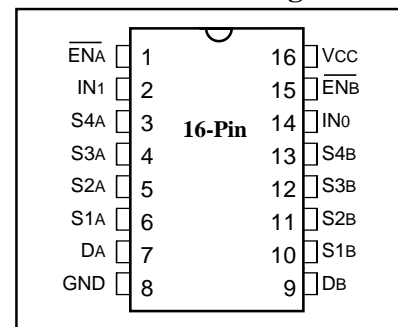

Low ON-resistance and wide bandwidth make it ideal for video and other applications. Also this device has exceptionally high current capability which is far greater than most analog switches offered today. A single 5V supply is all that is required for operation.

The PI5V331 offers a high-performance, low-cost solution to switch between video sources.
