

### Product Features:

- $V_{CC}=5V \pm 10\%$
- Balanced output drivers:  $\pm 12 \text{ mA}$
- Output impedance:  $35\Omega$  (typical)
- Typical  $V_{OLP}$  (Output Ground Bounce)  $< 0.5V$  at  $V_{CC}=5V$ ,  $T_A=25^\circ\text{C}$
- Bus Hold retains last active bus state during tri-state
- Hysteresis on all inputs
- Packages available:
  - 48-pin 240 mil wide plastic TSSOP (A)
  - 48-pin 300 mil wide plastic SSOP (V)
  - 48-pin 150 mil wide plastic BQSOP (B)
- Device models available on request

### Product Description:

Pericom Semiconductor's PI74FCT series of logic circuits are produced in the Company's advanced 0.6 micron CMOS technology, achieving industry leading speed grades.

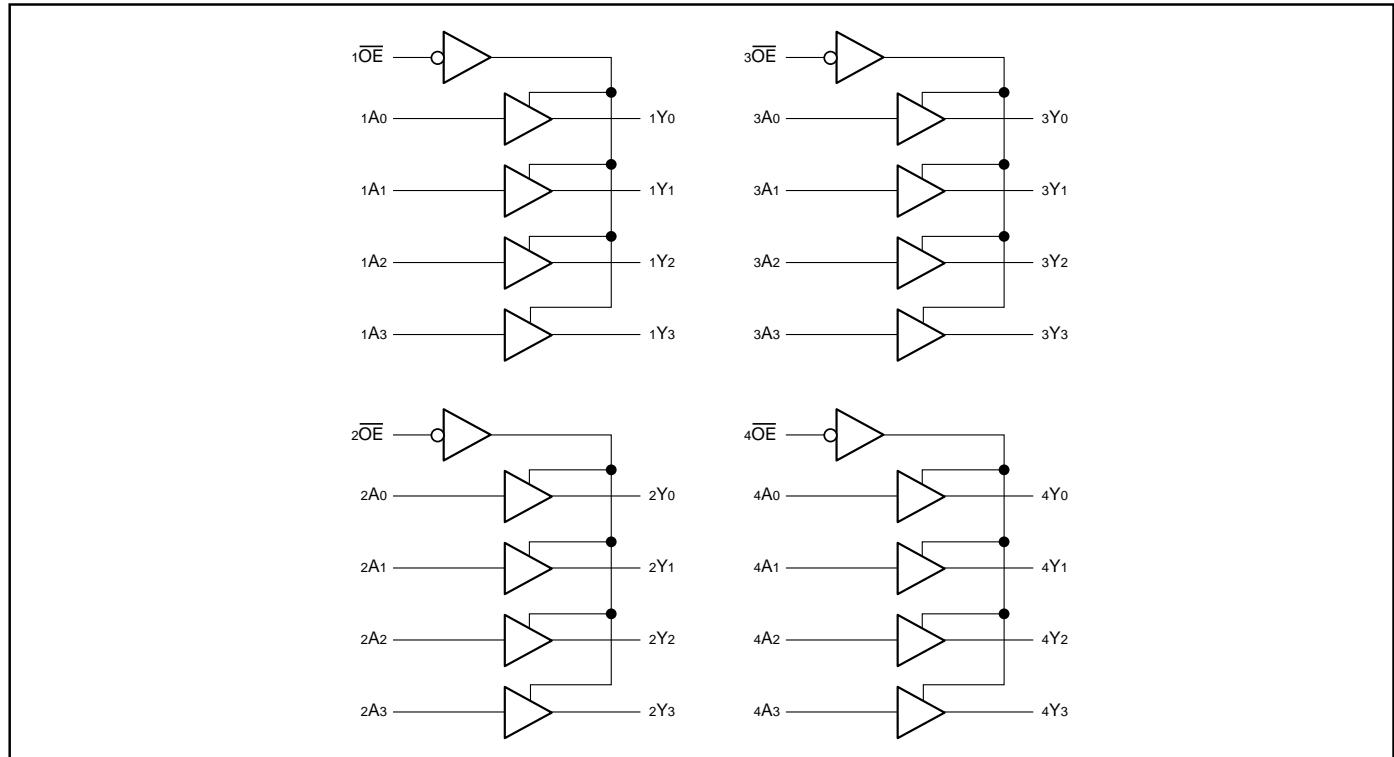

The PI74FCT162Q244T is a non-inverting 16-bit buffer/line driver designed for bus interface applications where low noise operation is essential.

The PI74FCT162Q244T is designed with current limiting resistors at its outputs to control the output edge rate resulting in lower ground bounce and undershoot. This device features a typical output impedance of  $35\Omega$ , eliminating the need for external terminating resistors for most bus interface applications. This noise suppression benefit is designated by the letter "Q" (for quiet) in the part number.

The PI74FCT162Q244T also features "Bus Hold" which retains the input's last state whenever the input goes to high-impedance preventing "floating" inputs and eliminating the need for pullup/down resistors.

This high-speed, low power device also features a flow-through organization for ease of board layout. These devices are designed with three-state controls to operate in a Quad-Nibble, Dual-Byte, or a single 16-bit word mode.

### Logic Block Diagram

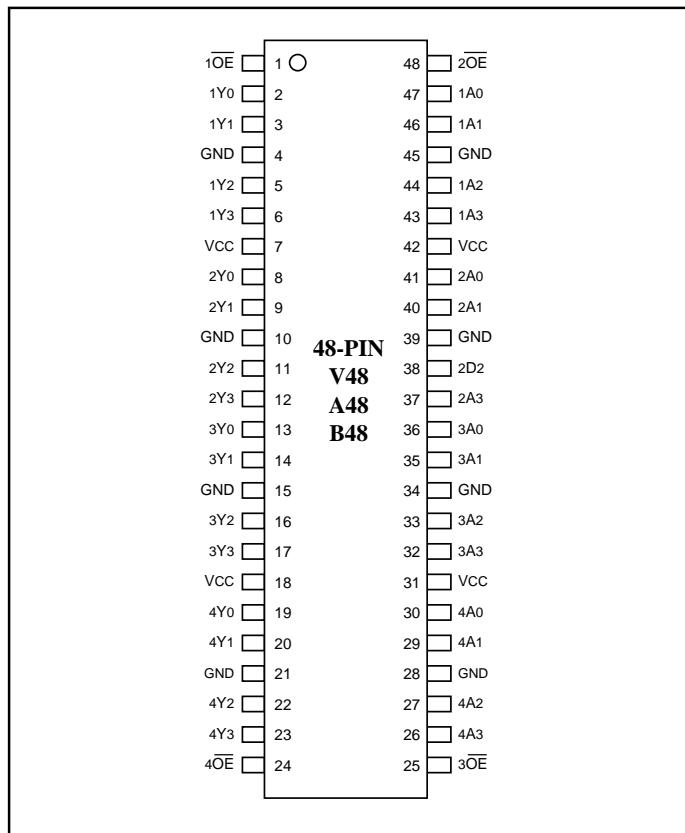

### Product Pin Description

| Pin Name     | Description                               |
|--------------|---|
| x $\bar{OE}$ | 3-State Output Enable Inputs (Active LOW) |
| xAx          | Inputs <sup>(1)</sup>                     |
| xYx          | 3-State Outputs                           |
| GND          | Ground                                    |
| VCC          | Power                                     |

**Note:** 1. For the PI74FCT162Q244T, these pins have "Bus Hold." All other pins are standard, outputs, or I/Os.

### Product Pin Configuration

### Truth Table

| Inputs <sup>(1)</sup> |     | Outputs <sup>(1)</sup> |
|-----------------------|-----|------------------------|
| x $\bar{OE}$          | xAx | xYx                    |
| L                     | L   | L                      |
| L                     | H   | H                      |
| H                     | X   | Z                      |

**Note:** 1. H = High Voltage Level  
 X = Don't Care  
 L = Low Voltage Level  
 Z = High Impedance

**LOW NOISE 16-BIT BUFFER/LINE DRIVER**

### Maximum Ratings

(Above which the useful life may be impaired. For user guidelines, not tested.)

|   |                 |
|---|-----------------|
| Storage Temperature .....                                     | -65°C to +150°C |
| Ambient Temperature with Power Applied .....                  | -40°C to +85°C  |
| Supply Voltage to Ground Potential (Inputs & Vcc Only) .....  | -0.5V to +7.0V  |
| Supply Voltage to Ground Potential (Outputs & D/O Only) ..... | -0.5V to +7.0V  |
| DC Input Voltage .....  | -0.5V to +7.0V  |
| DC Output Current .....                                       | 120 mA          |
| Power Dissipation .....                                       | 1.0W            |

#### Note:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

### DC Electrical Characteristics (Over the Operating Range, TA = -40°C to +85°C, VCC = 5.0V ± 10%)

| Parameters       | Description          | Test Conditions <sup>(1)</sup>                      |                        | Min. | Typ <sup>(2)</sup> | Max. | Units |

#### Notes:

1. For Max. or Min. conditions, use appropriate value specified under Electrical Characteristics for the applicable device type.
2. Typical values are at VCC = 5.0V, +25°C ambient and maximum loading.
3. Not more than one output should be shorted at one time. Duration of the test should not exceed one second.
4. Pins with Bus Hold are identified in the pin description.
5. This specification does not apply to bi-directional functionalities with Bus Hold.

#### Notes:

1. For Max. or Min. conditions, use appropriate value specified under Electrical Characteristics for the applicable device.
2. Typical values are at V<sub>CC</sub> = 5.0V, +25°C ambient.
3. Per TTL driven input (V<sub>IN</sub> = 3.4V); all other inputs at V<sub>CC</sub> or GND.
4. This parameter is not directly testable, but is derived for use in Total Power Supply Calculations.
5. Values for these conditions are examples of the I<sub>CC</sub> formula. These limits are guaranteed but not tested.
6. I<sub>C</sub> = I<sub>QUIESCENT</sub> + I<sub>INPUTS</sub> + I<sub>DYNAMIC</sub>

$$I_C = I_{CC} + \Delta I_{CC} D_{HNT} + I_{CCD} (f_{CP}/2 + f_i N_i)$$

I<sub>CC</sub> = Quiescent Current

ΔI<sub>CC</sub> = Power Supply Current for a TTL High Input (V<sub>IN</sub> = 3.4V)

D<sub>H</sub> = Duty Cycle for TTL Inputs High

N<sub>T</sub> = Number of TTL Inputs at D<sub>H</sub>

I<sub>CCD</sub> = Dynamic Current Caused by an Input Transition Pair (HLH or LHL)

f<sub>CP</sub> = Clock Frequency for Register Devices (Zero for Non-Register Devices)

f<sub>i</sub> = Input Frequency

N<sub>i</sub> = Number of Inputs at f<sub>i</sub>

All currents are in millamps and all frequencies are in megahertz.
