

74F269
8-bit bidirectional binary counter

Product specification<br>1996 Jan 05<br>IC15 Data Handbook

## FEATURES

- Synchronous counting and loading
- Built-in look-ahead carry capability
- Count frequency 115 MHz typ
- Supply current 95 mA typ

## DESCRIPTION

The 74F269 is a fully synchronous 8 -stage Up/Down Counter featuring a preset capability for programmable operation, carry look-ahead for easy cascading and a U/D input to control the direction of counting. All state changes, whether in counting or parallel loading, are initiated by the rising edge of the clock.

$H=$ High voltage level
$h=$ High voltage level one setup prior to the Low-to-High clock transition
L = Low voltage level
I = Low voltage level one setup time prior to the Low-to-High clock transition
$q=$ Lower case letters indicate the state of the referenced output prior to the Low-to-High clock transition
X $=$ Don't care
$\uparrow=$ Low-to-High clock transition
$(\mathrm{a})=\overline{\mathrm{TC}}$ is Low when CET is Low and the counter is at Terminal Count. Terminal Count Up is with all $\mathrm{Q}_{\mathrm{n}}$ outputs High and Terminal Count Down is with all Qn outputs Low.

## NOTES:

1. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.
2. All typical values are at $\mathrm{V}_{\mathrm{CC}}=5 \mathrm{~V}, \mathrm{~T}_{\mathrm{amb}}=25^{\circ} \mathrm{C}$.
3. Not more than one output should be shorted at a time. For testing los, the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a High output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter tests, los tests should be performed last.

## DEFINITIONS:

$\mathrm{R}_{\mathrm{L}}=$ Load resistor; see AC ELECTRICAL CHARACTERISTICS for value.
$C_{L}=$ Load capacitance includes jig and probe capacitance; see AC ELECTRICAL CHARACTERISTICS for value.
$\mathrm{R}_{\mathrm{T}}=$ Termination resistance should be equal to $\mathrm{Z}_{\text {OUT }}$ of pulse generators.

## DEFINITIONS

| Data Sheet Identification | Product Status | Definition |
| :---: | :---: | :--- |
| Objective Specification | Formative or in Design | This data sheet contains the design target or goal specifications for product development. Specifications <br> may change in any manner without notice. |
| Preliminary Specification | Preproduction Product | This data sheet contains preliminary data, and supplementary data will be published at a later date. Philips <br> Semiconductors reserves the right to make changes at any time without notice in order to improve design <br> and supply the best possible product. |
| Product Specification | Full Production | This data sheet contains Final Specifications. Philips Semiconductors reserves the right to make changes <br> at any time without notice, in order to improve design and supply the best possible product. |

Philips Semiconductors and Philips Electronics North America Corporation reserve the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified. Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

LIFE SUPPORT APPLICATIONS
Philips Semiconductors and Philips Electronics North America Corporation Products are not designed for use in life support appliances, devices, or systems where malfunction of a Philips Semiconductors and Philips Electronics North America Corporation Product can reasonably be expected to result in a personal injury. Philips Semiconductors and Philips Electronics North America Corporation customers using or selling Philips Semiconductors and Philips Electronics North America Corporation Products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors and Philips Electronics North America Corporation for any damages resulting from such improper use or sale.
