30Ω line drivers

74F30240*, 74F30244

74F30240 Octal 30Ω line driver with enable, inverting (open collector)
 74F30244 Octal 30Ω line driver with enable, non-inverting (open collector)

FEATURES

- Ideal for driving transmission lines or backplanes. 160mA I_{OL} ideal for applications with impedance as low as 30Ω
- Guaranteed threshold voltages on the incident wave while driving line as low as 30Ω
- High impedance NPN base inputs for reduced loading (20μA in High and Low states)
- Ideal for applications which require high output drive and minimal bus loading
- Octal interface
- 74F30240 inverting
- 74F30244 non-inverting
- Open-Collector outputs sink 160mA
- Multiple side pins are used for V_{CC} and GND to reduce lead inductance (improves speed and noise immunity)
- Available in 24-pin standard slim DIP (300mil) plastic, SOL or CERDIP packages

DESCRIPTION

The 74F30240 and 74F30244 are high current open collector octal buffers composed of eight inverters. The 74F30240 has inverting data paths and the 74F30244 has non-inverting paths. Each device has eight inverters with two Output Enables ($\overline{OE}0$, $\overline{OE}1$), each controlling four outputs. Both drivers are designed to deal with the low-impedance transmission line effects found on printed circuit boards when fast edge rates are used. The 160mA I_{OL} provides ample power to achieve TTL switching voltages on the incident wave.

 - a. 50% duty cycle,
 AND
 - b. 3/5 of remaining 50% driving ≤ 100mA (leaving the remaining 2/5 of the drive ≤ 160mA)
 OR
 - c. use ≤ 450 linear feet per minute forced air or other thermal mounting techniques.
