Divide by: 128/129-64/65 dual modulus low power ECL prescaler

SA701

DESCRIPTION

The SA701 is an advanced dual modulus (Divide By 128/129 or 64/65) low power ECL prescaler. The minimum supply voltage is 2.7V and is compatible with the CMOS UMA1005 synthesizer from Philips and other logic circuits. The low supply current allows application in battery operated low-power equipment. Maximum input signal frequency is 1.1GHz for cellular and other land mobile applications. There is no lower frequency limit due to a fully static design. The circuit is implemented in ECL technology on the QUBiC process. The circuit will be available in an 8-pin SO package with 150 mil package width and in 8-pin dual in-line plastic package, and is pin compatible with Fujitsu MB501, Plessey SP8704 and Motorola MC12022.

DESCRIPTION OF OPERATION

The SA701 comprises a frequency divider circuit implemented using a divide by 4 or 5 synchronous prescaler followed by a 5 stage synchronous counter, see BLOCK DIAGRAM. The normal operating mode is for SW (Modulus Set Switch) input to be set low and MC (Modulus Control) input to be set high in which case the circuit comprises a divide by 128. For divide by 129 the MC signal is forced low, causing the prescaler circuit to switch into divide by 5 operation for the last cycle of the synchronous counter. Similarly, for divide by 64 and 65 the SA701 will generate those respective moduli with the SW signal forced high, in which the fourth stage of the synchronous divider is bypassed. A truth table for the modulus values is given below:

Table 1.

Modulus	MC	SW
128	1	0
129	0	0
64	1	1
65	0	1

For minimization of propagation delay effects, the second divider circuit is synchronous to the divide by 4/5 stage output.

The prescaler input is positive edge sensitive, and the output at the final count is a falling edge with propagation delay t_{PD} relative to the input. The rising edge of the output occurs at the count 64 for modulus 128/129 or count 32 for modulus 64/65 with delay t_{PD}. The SW input is not designed for synchronous switching.

The MC and SW inputs are TTL compatible threshold inputs operating at a reduced input current. CMOS and low voltage interface capability are allowed. The SW input has an internal pull-down simplifying modulus group selection. With SW open the divide by 128/129 mode is selected and with SW connected to V_{CC} divide by 64/65 is selected.

The prescaler input is differential and ECL compatible. The output is single-ended ECL compatible.
